Intro

Why develop my own TTRPG?

1. I wanted the impact and excitement of DnD character progression while having sound pillars for balance.
2. I wanted to create a feeling, where all characters feel OP. Obviously when everyone is OP, and the villains are OP then no-one is OP. However I do believe this feeling can be created by allowing characters to really shine in a few things, so the feeling of OP-ness ends up being a rotational, as situations and circumstances change.
3. I wanted a system which supports GM and makes his life easier. The idea here is to bake the best practices already into the rules somehow, since the philosophy is that, simple rules often simply hide the complexity inside the execution of these rules. I want to move some of the cost of running the game into learning the rules.
4. The goal of this particular setting is to facilitate a game, with limitations, time pressure, a campaign where the world is at some cross roads, and players are rewarded from squeezing the maximum out of every opportunity.
5. Just because, fun :)

What is still the same?

1. Roleplaying, it's still a open fantasy world, players can state what they want to achieve, and what they can or cannot do is determined by the narrative, common sense of the GM and dice.
2. Grid based combat. Measurement unit is 1 sq. (square) though

So what is different?

- 6 X d6 system, where players have 6 X d6 dice. In this game players first roll their dice, and then spend them during their combat turn to do actions, or during campaign turns to attempt to do actions. During combat each action requires a specific combination of dice, and also to upcast spells or to add weapon abilities onto your attack, it requires you to get even more difficult combinations. But basically those Xd6 dice that you roll each turn, become your action economy and success checks at the same time. Also when you take damage you start losing some of those dice making you increasingly weaker until you are healed. But same goes to the enemy. Because of that significantly damaged enemies are much more incentivised to flee or surrender than to continue fighting.
- Very little stat stacking. Your character is mostly defined by their proficiencies. What school of magic they know, what weapons they are good at, what skills have they mastered. You don't specifically put points into general abilities such as strength, instead if you are proficient with an axe, you also are equally strong and being good at axe basically helps you do simple tasks that would require strength.
- No races in a mechanical point of view. You can choose your own race, and if that race is supposed to have some special ability like dark vision, or flying, then there is a trade-off system for these features, and that comes at the expense of your other level 1 powers. Again, that takes away the need to pick a race to get a few numbers advantage for the build and instead you can focus on the role playing, background, flavour aspect of any race (I mean let's face it, that's what custom

lineages are for, and now everyone want to have that free feat at level 1 for everyone, so we might as well do away with races).

- No traditional classes, and therefore no multi-classing, but with a caveat
- Instead players get to define their innate ability among 3 paths - mage, martial and skilled. Mages can cast spells, and are really only defined by their school of magics they choose to focus on, but basically they can do stuff noone else can, martials excel in combat, both in being able to take a punch but also excel in their sustained damage dealing potential. Skilled excel in campaign progression, creative solutions to all sorts of problems, and generally in everything out of combat. Heroes get to spread out 6 points when creating their character among the 3 paths. The maximum in each path, one can assign is 4 points, giving them a legendary innate ability in that path. That means every hero is somewhat acquainted in at least 2 of the 3 paths. The end result of this is that even though there are no classes, the choice of how you distribute the 6 path points really defines what your character can be built as, in a way there are 19 meta classes (the number of ways these 6 points can be distributed).
- There is a simple advancement system. Each level-up you get to advance in your innate paths depending your initial point distribution. Both general things like being able to cast more spells, capping your proficiency in some school of magic, weapon or skill and character defining things like picking feats is used by a shared pool of advancements. The advancement options, and also feat options are different for each path.
- Weapon choice matters. Both because each weapon requires investment to become proficient in it, so you can't be master with all weapons, but also because each weapon can have multiple awesome abilities. The abilities have been made significantly more impactful, but with a caveat. You need to spend some of the dice to use these special abilities
- Your mage is defined by your schools of magic you choose to focus on. Again, to become proficient and be able to cast the most powerful spells in some school of magic, you need to have spent those precious advancement points on those schools of magic, meaning you cannot have all the spells, and the choices you make really define your character.
- Less spells is more spells. Instead of having 10 spells that do the same thing but with different numbers, there are less spells, usually each spell is very unique and provides a unique ability or mechanic not achievable through other spells. Instead there are a lot more scaling options for spells. A spell can have 1 or more scaling options. In addition all spells can be augmented by taking one of the many metamagic feats providing additional scaling options. So when you gain the ability to cast more difficult spells, you actually gain the ability to cast your existing spells with additional power. And yes, there is only a single heal spell in the game. It is called heal. One gets access to it at level 1, and you can scale it, in very many ways.
- Time advancement is abstracted. Campaign is played in campaign turns, they can be quick turns, medium turns and strategic turns. This abstraction does away with considerations like how many minutes is a short rest, or what time it is. A good day of work consists of either 1 or 2 medium turns.

So when players complete a medium turn that started in the morning, then it is now late afternoon.

Each turn consists of rolling the 6 d6 once and spending them to do things.

- We did away with skills, and instead players choose creative skill traits, that are associated with one of the 6 general abilities. These creative skills have proficiencies, and players can get better at these skills. These proficiencies are on the same level of abstraction as weapon proficiencies, and school of magic proficiencies.

Character creation

Instead of classes there are 3 Paths - Mage, Martial and Skilled. You define how good your character is in any of these paths. There are 4 levels in each PATH:

1 - acquainted

2 - adept

3 - talented

4 - legendary

Heroes get a total of 6 path points, which they can spread out among these 3 paths defining their innate ability. This determines how fast they advance in these paths while leveling up and what is their maximum potential in these paths. In a way the way they spread it out defines their class, so there are 19 classes in the sense of how many ways you can distribute those 6 path points, but each distribution of course has also very many ways to build your character.

For example you could be a Nature wizard who is either Talented or Legendary, and depending on that you could be more or less diversified in other areas.

All players start with 6 d6 dice in their dice pool, for both combat and out of combat, 2 toughness (determines how much damage you can take before you die), proficiency in light armor and access to some general actions (all detailed in general actions chapter), and 2 creative character traits. In addition they can start with +2 proficiency with one trait, weapon or school of magic, and +1 proficiency with 2 other trait, weapon or school of magic. Both of the character traits must start with at least +1 proficiency though.

In addition they get a foundation power for each path they have path points in, but the power of the feat depends on their level in that path. This further defines their character progression possibilities. Foundations are really powerful.

Finally each hero gets a play card for each path they have points in. Take the appropriate play card. So if you are talented mage, adept martial and acquainted in skilled, then take the playcards with these names.

At level 1 and in all future levels players get to mark minor and major advancement options in these playcards (the number is stated at the bottom of the playcard). Each option can be taken as many times as the number of check boxes next to it. The number of check boxes increases at levels 5 and 9.

Also at level 1 decide how do scarred dice work. When you take damage, you lose dice, all magical healing does give you back the damaged dice, but each healing scars one of the dice. There are however options (see scarred dice in glossary) for how it will actually affect you.

Finally at level 1 and only at level 1 each character gets extra resources for each of the path they assigned points to. For each point in mage path, player gets 3 maximum mana. For each point in Martial path, player gets 1 maximum stamina. For each point in skilled path, player gets 1 maximum luck tokens.

Advancement rules

The maximum proficiency is in general +4, but using some foundations it can be raised to up to +5. In advancement options it is often stated "(max X prof)", that indicates the proficiency that can be attained with this option. Note that this max only takes into consideration the proficiency gained from advancement options and not foundations.

Proficiency allows you to shift the dice results by 1 in order to get the dice result requires to perform the action related with this proficiency. You can perform number of shifts equal to your proficiency each round / scene.

Playcards

Acquainted Mage path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain 1 small mage feat

gain 12 maximum mana

gain 1 spell school proficiency (max prof. 3)

Minor advancement options

gain 1 spell school proficiency and learn a spell from that school (max prof. 1)

gain 1 spell school proficiency (max prof. 2)

learn 2 spells from any schools of magic

Grant an additional 1 mental slots that can be used for spells.

gain 1 intelligent trait proficiency (max prof. 2)

gain 6 mana

Gain 1 minor option at levels 1, 2 and 4, and 1 major option at levels 3

Adept Mage path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain 1 medium mage feat

gain 16 maximum mana

gain 1 spell school proficiency (max prof. 3)

Minor advancement options

gain 1 small mage feat

gain 1 spell school proficiency and learn a spell from that school (max prof. 1)

gain 1 spell school proficiency (max prof. 2)

learn 2 spells from any schools of magic

Grant an additional 1 mental slots that can be used for spells.

gain 1 intelligent trait proficiency (max prof. 2)

gain 8 mana

gain 6 mana

Gain 2 minor options at levels 1, 3 and 4, and 1 major option at levels 2

Talented Mage path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain major mage feat

gain 20 maximum mana

gain 2 spell school proficiency (max prof. 4)

Minor advancement options

gain 1 medium mage feat

gain 1 small mage feat

gain 1 spell school proficiency and learn a spell from that school (max prof. 2)

gain 1 spell school proficiency (max prof. 3)

learn 2 spells from any schools of magic

Grant an additional 2 mental slots that can be used for spells.

Grant an additional 1 mental slots that can be used for spells.

gain 1 intelligent trait proficiency (max prof. 2)

gain 8 mana

gain 6 mana

Gain 3 minor options at levels 1 and 3, and 1 major option at levels 2 and 4

Legendary Mage path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain major mage feat

gain 20 maximum mana

gain 2 spell school proficiency (max prof. 4)

Minor advancement options

gain 1 medium mage feat

gain 1 small mage feat

gain 1 spell school proficiency and learn a spell from that school (max prof. 2)

gain 1 spell school proficiency (max prof. 3)

learn 2 spells from any schools of magic

Grant an additional 2 mental slots that can be used for spells.

Grant an additional 1 mental slots that can be used for spells.

gain 1 intelligent trait proficiency (max prof. 2)

gain 8 mana

gain 6 mana

Mark 4 minor options at levels 1 and 3, and 1 minor and 1 major option at levels 2 and 4

Acquainted Martial path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain 1 small martial feat

gain 4 maximum stamina

advance 1 times in toughness or with any weapon or shield.
(max prof. 3)

Minor advancement options

gain 1 toughness (max prof. 2)

gain 1 weapon or shield proficiency (max prof. 1)

gain 2 stamina

gain 1 stamina

Gain 1 minor option at levels 1, 3 and 4, and 1 major option at levels 2

Adept Martial path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain 1 medium martial feat

gain 6 maximum stamina

advance 1 times in toughness or with any weapon or shield.
(max prof. 3)

Minor advancement options

gain 1 small martial feat

gain 1 toughness (max prof. 2)

gain 1 weapon or shield proficiency (max prof. 2)

gain 2 stamina

gain 1 stamina

Gain 2 minor options at levels 1, 3 and 4, and 1 major option at levels 2

Talented Martial path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain major martial feat

gain 8 maximum stamina

advance 2 times in toughness or with any weapon or shield.
(max prof. 4)

Minor advancement options

gain 1 medium martial feat

gain 1 small martial feat

gain 1 toughness

gain 1 weapon or shield proficiency (max prof. 2)

gain 1 weapon proficiency with 2 different weapons (max prof. 2)

gain 1 weapon or shield proficiency (max prof. 3)

gain 3 stamina

gain 2 stamina

gain 1 stamina

Gain 3 minor options at levels 1 and 3, and 1 major option at levels 2 and 4

Legendary Martial path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain major martial feat

gain 8 maximum stamina

advance 2 times in toughness or with any weapon or shield.
(max prof. 4)

Minor advancement options

gain 1 medium martial feat

gain 1 small martial feat

gain 1 toughness

gain 1 weapon or shield proficiency (max prof. 2)

gain 1 weapon or shield proficiency with 2 different weapons
(max prof. 2)

gain 1 weapon or shield proficiency (max prof. 3)

gain 3 stamina

gain 2 stamina

gain 1 stamina

Mark 4 minor options at levels 1 and 3, and 1 minor and 1 major option at levels 2 and 4

Acquainted Skilled path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain 1 small skilled feat

Gain a new creative skill, which starts with 0 proficiency

gain 4 maximum luck

advance 1 times with any skill (max prof. 3)

Minor advancement options

gain 1 skill proficiency (max prof. 2)

gain 2 luck

gain 1 luck

Gain 1 minor option at levels 1, 3 and 4, and 1 major option at levels 2

Adept Skilled path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain 1 medium skilled feat

Gain a new creative skill, which starts with 1 proficiency

gain 6 maximum luck

advance 1 times with any skill (max prof. 3)

Minor advancement options

gain 1 small skilled feat

gain 1 skill proficiency (max prof. 2)

gain 2 luck

gain 1 luck

Gain 2 minor options at levels 1, 3 and 4, and 1 major option at levels 2

Talented Skilled path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain major skilled feat

Gain a new creative skill, which starts with 2 proficiency

gain 8 maximum luck

advance 2 times with any skill (max prof. 4)

Minor advancement options

gain 1 medium skilled feat

gain 1 small skilled feat

Gain a new creative skill

gain 1 skill proficiency (max prof. 2)

gain 1 skill proficiency (max prof. 3)

gain 2 any skill proficiencies (max prof. 1)

gain 3 luck

gain 2 luck

gain 1 luck

Gain 3 minor options at levels 1 and 3, and 1 major option at levels 2 and 4

Legendary Skilled path

Major advancement options

lvl 1-4

lvl 5-8

lvl 9-12

gain major skilled feat

Gain a new creative skill, which starts with 2 proficiency

gain 8 maximum luck

gain 2 any skill proficiencies (max prof. 4)

Minor advancement options

gain 1 medium skilled feat

gain 1 small skilled feat

Gain a new creative skill

gain 1 skill proficiency (max prof. 2)

gain 1 skill proficiency (max prof. 3)

gain 2 any skill proficiencies (max prof. 1)

gain 3 luck

gain 2 luck

gain 1 luck

Mark 4 minor options at levels 1 and 3, and 1 minor and 1 major option at levels 2 and 4

All game concepts

Dice pool

All characters start with 6 dice, which forms their dice pool. However when a character takes damage they must set aside dice from the dice pool, until they have no more of them in the dice pool at which point they are left incapacitated

Dice Roll

During a dice roll, your entire dice pool is rolled at once. Afterwards you can pick and choose which dice to use on which action.

Out of combat, dice rolls happens at the beginning of each campaign turn.

In combat, dice rolls happen at the end of each players turn. The players can use dice from the dice pool for reactions in between their turns and for actions during their turn.

Power dice and utility dice

Each weapon type, school of magic and combat action has 2 dice, power dice, and utility dice. To activate the action (attack, spell) and to boost it's raw power you need to get power dice. But to augment the action / spell in useful ways, you need utility dice. For example, the power dice of swords is R5 (a dice that rolled a 5) and utility dice is R2.

Reactions

Some feats provide characters abilities for reactions under certain conditions outside their turn. These still consume dice in the dice pool.

Roll target

All actions have some certain roll target. For example R6.R6.R6 means that you need 3 dice with the 6 result in order to perform this action. Also various outcomes in social encounters or campaign in general have roll targets, which have to be met in order to get the desirable results, these are also called as challenges.

Proficiency

Players can have proficiency in a skill, weapon class, school of magic or a saving throw. Proficiency allows them to nudge dice results in order to easily meet the roll target so that the desired rolls are met much more consistently.

Proficiency bonus

Proficiency bonus ranges from 1 to 4. That means how many times you can nudge dice by 1 in a given round / scene to meet a roll target that is related to the skill, weapon or school of magic of the proficiency at hand.

For example with a proficiency of 2 you can nudge the roll of two separate dice by 1, or a roll of a single dice by 2. You can only nudge the rolls of a dice used on the roll target that you actually use on the roll target.

Advantage and disadvantage

When you get an advantage, then you get to do 1 additional nudge. With a disadvantage, however you get to do 1 less nudge. If you get disadvantage to an action, which you have 0 proficiency, then you cannot do that action.

Normal advantage and disadvantage does not stack. However some effects can specifically provide double advantage or double disadvantage, which simply doubles the effect of advantage or disadvantage respectively.

Campaign mode and combat mode

At all times the game is either in campaign mode or combat mode. In campaign mode the order of things is much more loose and really a constant negotiation and feel good between the GM and players.

In combat however, The order is more strict. The surprise round may vary, but afterwards each round works as follows: Players and Enemies take turns and do all the actions of one actor at a time, until everyone from one side has moved, then the remaining from the opposing side do their moves.

The player turn order is decided by party leader, who is decided at the beginning of each session.

Time scales

The campaign is split into turns. Each turn players roll their entire dice pool and can use these dice to represent the focus and effort they put into various actions and activities. However to better help abstract the time, we divide turns into 3 different time scales.

Strategic turns, long, represent like a weeks time passing, that's where GM can progress all campaign related NPC agendas. Trigger events happening in the world, and introduce bigger changes. Strategic turns can be made when players want to travel long distances, do very laborous and extensive activities like prepare for siege, build up player holding, craft armor and weapons, or to simply have a proper rest.

Medium turns are around 6-10 hours of activity. Activities done in medium turns can be like a thorough research of a topic in the library, if done as a group activity, track a beast in the wilderness (hunt), gather herbs in the wilderness, interrogate 20 witnesses, prepare for a feast, ball, party. Usually when players have taken back to back 5 -7 medium turns, it is ok to also advance 1 strategic turn for the whole world (if you are tracking NPC activity and event count downs for example). The abstraction here is that you cannot just do hyper productive work all the time, you slow down, need to rest etc. so this is roughly the time it would take for it to become a week. When medium turns end, GM should consider what NPC-s do in the local settlement, or in general in the vicinity when in nature.

Quick turns are around 5-30 minutes. They are intense activity. Quick turns are used when doing infiltrations, intense negotiations that goes back and forth, or when we really want to go into very high detail of any particular activity. Again, 5 - 7 quick turns turn into a medium turn. For GM, during switching from one quick turn to another only the most local NPC activity should be considered, like when infiltrating the fort, then what the guards do?

Combat turns are even quicker, but again, once around 5 - 7 combat turns have been done, consider advancing 1 quick turn, maybe that brings reinforcements?

Combat setup

You may know a lot of spells, or be able to do a lot of actions or use a lot of different weapons. However you can use a limited number of them in combat decided by your combat setup. By default all players have 4 slots. One for right hand, one for left hand, and two for mental. The action available for the right and left hand is decided by what you wield. Mental slot can be filled with a spell, skill action etc. Also by freeing left or right hand you can instead have an additional mental slot. Magical weapons like wands or staves also grant mental slots for spells.

By spending 2 dice from the dice pool, a player can switch what they are wearing in their hands with a backup setup, the mental slots however cannot be changed.

taking damage and various defenses

If you take X damage then it is mitigated followingly:

1. First subtract damage reduction from the damage
2. Then character's remaining defense mitigates it as much as possible. All mitigated damage lowers character's defense, but not maximum defense.
3. The rest of the damage hits the character's "life pool", see next topic

Defense can be recovered by taking the Defense action, with which one recovers up to their maximum number of defense.

taking damage to life

In combat or certain situations out of combat characters may take damage. When that happens they set aside dice from their dice pool following these rules:

1. Each dice mitigates damage equal to character's toughness.
2. When you have a dice that is set aside that can still mitigate some damage, it mitigates that damage before a new dice is set aside.
3. When you have no dice set aside which can mitigate damage but there is still incoming damage to be mitigated, then you must take another dice from dice pool and set it aside and use it to mitigate the remaining damage
4. Note that the maximum toughness is 6, so that you can always use the set aside D6 to mark the remaining damage it can still mitigate.
5. Note that you cannot set aside bonus dice from the dice pool, but only the dice granted to you inherently.
6. You cannot set aside scarred dice as long as you have normal dice.

7. Scarred dice always only mitigate 1 damage.

Healing and scarred dice

Each time you receive healing and recover some of the set aside dice, one of those dice become scarred (try to have them in different color, like red for example).

Scarred dice are weaker than normal dice, so when rolling your dice pool make sure they can be separated from normal dice. When you create your character and during each level up you may change the behaviour of scarred dice. But one of the behaviours has to be chosen.

1. Scarred dice can only be used as 1, 2 or 3 in any roll target. You can still nudge them lower if they roll 4, 5 or 6.
2. Scarred dice cannot be nudged.
3. To use a scarred dice you need to spend an additional die (which may be scarred though).

To turn scarred dice back to normal dice, players must take time out and recover.

During recovery, by spending various resources like herbs, good food etc. one can change scarred dice back to normal dice.

Exhausting dice

Some effects force players to exhaust dice. They are set aside from the dice pool. By default players recover 1 exhausted dice per round.

incapacitated

When you have no more dice in your dice pool, you are incapacitated, cannot move normally nor do any actions, even if you have bonus actions or dice. Your character can still talk, and crawl 1 sq. per round.

Each damage turns one of the set aside dice into scarred dice (you can only receive healing by scarring a not scarred dice).

If there are no dice left to scar when you take damage, you die.

moral

All enemies and NPC allies have moral. That means their willingness to fight. GM can obviously determine the moral for enemies. An average starting moral for mobs and NPCs is 10.

Here are the general guidelines for how moral is lost:

1. Each dice lost from the dice pool reduces 1 moral
2. Each ally lost reduces moral by 1
3. Losing a stronger ally reduces moral by additional 2
4. Dropping to 2 dice in your dice pool reduces moral by additional 3
5. Dropping to 1 dice in your dice pool reduces moral to 0 unless enemy is raging or smtht equivalent.
6. Getting outnumbered reduces moral by 2
7. Defeating an enemy increases moral by 2
8. For mobs losing half of their HP+DEF they lose 3 moral

Death

When a creature, whose all dice are scarred takes damage, they die.

Death is permanent. So if this happens to a player, they simply discard that character and need to make a new one.

Resources

Each path has a specific resource associated with their path. Mages have mana, Martials have stamina and Skilled have luck. Each resource is used for different effects and have different rules for recovering it. Mana is recovered during long rest by consuming expensive spices and is used to cast spells.

Stamina is recovered each encounter and can be used during combat to increase use scarred dice unconstrained and for some combat abilities, and luck tokens are recovered when a party chooses to take time out and recover for an extended period. change the outcome of a single dice in a roll, or to gain advantage.

Mana

When advancing in the mage path, characters can increase their maximum mana.

Mana is used to cast spells. Each dice they spend when casting spells costs 1 mana.

In addition even more mana can be spent to get virtual dice to make the spell even more powerful. For 1 mana you get 1 additional virtual dice (it still increases the cost of the spell, so you totally spend 2 mana. For 3 mana you get 2 dice, for 6 mana 3 dice and finally for 10 mana you get 4 dice.

You cannot receive more virtual dice than your proficiency in the spell's school of magic. Note that this is for casting spells during combat. When using magic in a scene, the mana cost for virtual dice is multiplied depending on the type of the out of combat turn. (1 x for quick turns, 2 x for medium turns, and 3 x for strategic turns, casting rituals is unaffected).

Mana is recovered during rest by consuming quite pricy magical spices. You must spend enough resources to reach maximum man, that means the more you consumed your mana during an encounter, the more pricy it will be. To recover 1 mana costs 5 gp.

Stamina

When advancing in the martial path, characters can increase their maximum stamina. Stamina can be used for following effects:

Do either "shield" or "defend" actions with just one R2 dice: 1 stamina

Deal 1 additional damage with your attack: 1 stamina

Double the movement of a single move action: 2 stamina

Only one of the previous options can be chosen per turn.

Another option to spend stamina during combat is to use a scarred dice ignoring the normal scarred dice limitation. That costs 1 stamina per scarred dice.

In addition some abilities may require stamina or provide means to recover stamina.

Stamina recovers after every encounter.

Luck tokens

When advancing in the skilled path, characters can increase their maximum luck tokens.

Each player can spend 1 luck token per turn for luck's default effect. When they do they can choose one effect from following:

- * Get 2 additional nudges (in addition to your proficiency and aiding)
- * re-roll up to 3 dice.
- * remove disadvantages and double disadvantages for you for this turn.

In addition some abilities may require Luck tokens to be used, these costs do not share the limit with it's default usage.

Luck tokens are recovered when the party chooses to take time out and recover.

Time out and recover

When players are heavily scarred and run out of luck, they may find themselves needing to take time out and recover. This should not be done lightly however, since in-game this takes an entire strategic turn. This means that this gives time for adversaries to advance in their plans, for the situation to change, and for new challenges to be introduced.

In addition they need to find a proper lodging and this time out will cost them money, as they rest and don't earn any money in the meanwhile.

Note, there are costs associated with lodging, and recovering from scarred dice. Luck is recovered on it's own.

status effect

Since whenever someone meets their roll target, then they always succeed, if anyone's actions grant other characters status effects they cannot be avoided. Status effects have usually ways to remove them by spending dice or they simply disappear over time. At the end of each player's turn, that player can remove a single level of either disoriented, afraid, poisoned or burning for free.

Concentration

Some spells can last more than 1 round of combat, but in order to do so they require concentration to be maintained. The concentration cost is displayed next to the spell info. It is also a roll target. At the beginning of your round in order not to lose the effect of the spell one must spend dice on the roll targets. Note that if you need to use your proficiency to meet these targets, then you have that many less nudges for all spells this round of the same school of magic.

Spell duration

When duration is not specified then the spell effect is immediate or for concentration spells, until you manage to hold concentration. When duration is specified the spell lasts for the duration. If this is concentration spell, it can last longer, but every time it's duration would end you will need to spend the mana cost as described previously when talking about concentration. When your concentration breaks, the spell ends regardless of it's duration. Duration spells without concentration cannot be ended by breaking concentration, but the spell caster may end their effect pre-maturely voluntarily.

Rituals

Rituals are powerful spell effects which take a lot more time to cast and require much more mana than normal spells. Like spells, the ritual caster needs to learn the ritual. However rituals can be casted by multiple spell casters. Only one of them is required to know the ritual, but mages who do not know the ritual have dis-advantage when casting the ritual.

How does it work? There are a certain number of dice that need to be met to complete the ritual. To complete these dice casters need to roll their entire dice pool multiple times. Each time the mana cost to roll the pool increases but using their proficiency they can progress in the ritual.

First roll costs 2 mana, then each consequent roll costs 2 additional mana. Proficiency using resets each roll, but disadvantage for not knowing the ritual also applies each roll. Also if you don't have proficiency, then you cannot aid in the ritual.

Rituals can be used to prepare for combat against the odds.

Some rituals can have semi permanent effects, but they often have some daily mana cost. Meaning it is a constant resource drain for the ritual caster.

Magical potions

Throughout the game-world players may find potions with magical effects and mages with the potion maker feat can make them themselves. Potions however have limitations. The roll target for the first potion is RX, meaning any single dice will do. The roll target for the second potions is RX for drinking the potion and R3 toughness check to stomach that potion. After that an additional R3 is added to the toughness check each time.

Different armors

There are 3 different armor categories in the game. Light armor, Medium armor and heavy armor.

Armor provides maximum defense. Light armor provides 2-3 maximum defense. Medium armor provides 3-5 maximum defense. Heavy armor also provides 3-5 maximum defense, but it also provides 1-2 damage reduction. The range depends on the quality of the armor and better quality armor becomes available as players progress in the campaign.

However each armor has certain additional upsides / downsides.

Having light or no armor: You have access to dodge.

Having medium armor: No upside or downside with proficiency. You have -1 physique proficiency penalty without medium armor proficiency. You cannot wear any armor if your physique proficiency

would go negative as a result.

Having heavy armor: You have -1 physique proficiency penalty if you have heavy armor proficiency. You have -2 physique proficiency penalty without heavy armor proficiency. You cannot wear any armor if your physique proficiency would go negative as a result.

Shields

Shields can be used to provide additional defensive actions. In addition they also provide 1-2 maximum defense.

Attunement

In order for characters to make use of magical items they need to attune to them. There are also some other effects that require attunement. By default all players can attune to up to 3 items, but some feats in the mage path allow for increased attunement.

Creative spells

Some spells may leave a lot of room for creativity. In this case it is important to have a way to balance it. It is perfectly alright, if the illusion magician creates whatever kind of illusionary image, question becomes what do they want to achieve with it, what do they think the effect should be on other people? Here is a general balance idea of what various effects should cost in power dices. Keep in mind that a good idea should given an advantage, and perfect ideas even double advantage, while none-sensical ideas can either be dis-allowed or allowed with disadvantage. And of course there can be staples in between, like disorienting with illusion, something your character always does, this can be allowed without advantage or disadvantage. But when a creative opportunity arises and the player notices, then you can reward the player with advantage or more. The goal is to create cool story moments with fun explanations which are still somewhat constrained by balance (RP in following context is power roll, this depends on your school of magic which the creative spell or ability belongs to).

1 RP: 4 damage 1 RP: 2 level of vulnerability or entangled, or 4 levels of unbalanced 2 RP: 1 level of disoriented, afraid, prone, burning or disruption 3 RP: blinded, 1 level of frozen 2 RP: Aid an ally to give them advantage, or upgrade advantage to double advantage X-1 RP: When presented with a challenge in the campaign turns, you can reduce the effort by 1 and use the creative's spell to resolve the challenge (if appropriate). In this case you use the school of magic's proficiency. When you spend additional mana to exert yourself, you gain virtual dice, with the value of 4.

The default range for effecting someone is 6 sq.

Abilities

To describe your general proficiency in various simpler tasks in the world, players have 6 different abilities.

Physique - physical endurance, control over your various muscles, this includes strength, endurance and flexibility of joints. This is used to recover defenses, and used in many martial feats.

Precision - Precise physical activity that also requires accurate applying of senses, this is like lock picking, knitting, archery, throwing anything accurately, sleight of hand.

Toughness - This also increases your HP. But is also used to recover from poison, stomach potions, endure pain, and all sorts of bodily harm.

Social - Mental ability to convince people, have presence in the room, but also to understand them, empathise and so on.

Intelligence - Mental ability to memorise, know stuff, but also apply the knowledge to make logical conclusions, pattern matching and finding connections.

Cunning - Mental ability to outsmart others, sense danger, notice important queues in the environment, have street smarts, survive in the wilds, see through web of intrigue.

Each weapon, school of magic or creative skill proficiency is relates to one ability. Your ability proficiency is determined by the best related proficiency.

The only exception is toughness, which cannot be related to any other proficiency and has to be increased through the martial path.

Creative skills

All player characters start with 2 creative skills, that describe something special they can do that a commoner couldn't do. It could be a back-ground, profession, or a unique skill. Each creative skill is related to a single ability. This connection further constraints the nature of the creative skill.

Combat

Combat has usually 2 sides. The player characters and their allies, and the enemy. The combat turns are simple. First one player character moves, then an opponent moves picked by the GM. Then another player moves and so on, until everyone from one side has moved. Then the remaining actors in the other side all take their turn.

Mobs

To make the combat flow quicker, then all enemies except for special characters have fixed attack damage, movement range and HP. There are 4 types of mobs, and each opposing encounter composition has the same statistics within a single type. To make it simpler, they are represented by famous chess pieces, which is nice, since you can take them from your chess game laying around and you already have the correct pieces to represent enemy units:

Pawns: the back bone and core of any encounter. They don't have special abilities, and have least HP, ATK and MV. Their tactics usually involve simply attacking the nearest enemy.

Knights: Fast moving, high maneuverable units, they have slightly more HP, ATK than pawns and the most MV out of any of the units. Their tactics involve attacking the weakest links, high aggro targets or someone who is already vulnerable.

Bishops: Ranged supporters, either archers, support spell casters, cyclops throwing stones etc. They often have high ATK but are comparable to pawns with regards to HP and MV.

Rooks: Tanks, high HP units with better ATK than pawns but not necessarily better movement. Their abilities can involve controlling the battlefield, denying movement, disabling spells, or stunning opponents.

In addition, when heroes apply status effects to Mobs, then they disrupt their turns, so that they don't do their move or attack action, but shrug of some of the negative status effects.

While pawns and bishops have disoriented or afraid, they skip their turn and lose 1 level of those. If they have 3 levels of those, they give up and flee the fight. If they have any levels of burning, they take the damage, skip their turn and lose all of them. If they are poisoned by a damaging effect, they simply do their turn and take the damage. If they have any levels of freezing they are removed from combat.

Knights and rooks can lose up to 2 levels of disoriented or afraid or all of burning (still take the damage). If they only lose 1 level of those, they take their turn partially by doing half movement and half damage or either movement or damage, halving is rounded down. If they have 2 levels of freezing, they are also removed from combat, or when they have 5 levels of combined disoriented and afraid. If they have 1 levels of freezing, then they act as if removing one level of some negative effect every turn (without removing it) and can only remove 1 levels of disoriented/afraid.

When a mob is prone, then they need to give up either their entire movement or their entire attack, but they do stand up.

In addition if a mob takes at least half of their hit points in damage they are also shocked and they skip their next turn.

This gives you the baseline. In different line ups, like for example when fighting a tribe of giants, this may differ. Also you could have an elite army, and all encounters against them, even the pawns would feel a lot tougher, and could have much stronger defensive and offensive capabilities.

Disadvantage for mobs halves their damage. And advantage gives them up to 2 extra damage but no more than 50 % of their original damage

Status effects

disruption

When a character gets disruption, then they lose a dice until the next re-roll chosen by the character who applied the disruption.

inspiration

You can spend your inspiration to either become lucky for a round / scene or gain advantage or negate disadvantage for a roll.

cover

You can have up to 3 levels of cover against a ranged attacker. Each level makes them require 1 additional power dice to hit you. First level is achieved with 50 % of your body being covered. Second level when at least 80% of your body is covered from sight of the ranger. Third level is reached when you have full cover. Then you cannot be attacked with ranged attack at all.

disoriented

When a character gets a level of disoriented they roll a die and discard a die in their pool with a matching number. During each re-roll of the dice pool, this process is repeated for each level of disoriented. Disoriented can be removed using the Refocus general action.

For example if Jack has 3 levels of disoriented and 5 dice remaining in their dice pool then he first rolls his 5 dice from the pool and suppose he gets R2,R3,R3,R5,R6. After that he rolls 3 disoriented dice and suppose he gets R2,R5,R5. Then he discards R2 and R5 from the pool and therefore cannot use those dice in the turn. Notice that since he rolled 2 R5 for disoriented, but only had 1 R5 in the pool, then the final disoriented die result had no effect. If Jack had rolled 2 x R5 into the pool, he would have lost both of them.

afraid

While having any levels of afraid, all offensive actions require an additional power dice for every 3 levels of afraid (rounded down). Afraid can be removed using the refocus action.

vulnerable

You take 1 additional damage per level in vulnerable, this counteracts damage reduction. Vulnerable levels are discarded at the beginning of your turn.

unbalanced

You can have up to 4 levels of unbalanced, you can use recover action to remove all levels of unbalanced. if you get to 4 levels of unbalanced, you fall over, getting prone status but losing all levels of unbalanced, if you are wearing heavy armor or are a large creature and would get a level of unbalanced, you have a 50 % chance to not get it.

entangled

Your position cannot change until you are entangled. You may spend a R5 (physique) to reduce the entangled by 1 level.

prone

You have disadvantage. You need to spend dice worth of 10 points total to lose prone status effect.

poisoned

You have some specific poison on you. Each poison can stack, but only the highest stacked poison takes effect. Poison can be removed using the recover general action.

freezing

Every level of freezing disable one dice from your dice pool.

burning

For each level of burning, one takes 1 damage at the start of their round. One can fall prone and spend the entire round (losing all concentration etc.) to lose all the stacks of burning. Freezing and burning levels cancel each other.

blinded

Characters who are blinded, cannot see. Movement costs twice as much unless you have blind-sight. Cannot target outside blind sight range. And you have double disadvantage when making melee attacks, and enemies have advantage when attacking you. Enemies who already have advantage upgrade it to double advantage.

Out of combat roleplaying / campaign pillars

1. There has to be a chance for things to go wrong? To get partial successes, complications, or trying and then actually failing and ending up in a dangerous situation because of it.
2. A simple way to abstract time passing. Time and pace are important for considering that the world around them also changes. An idea is to separate into 3 different time categories. Smallest one is considered equivalent to tens of minutes. When in this time abstraction, GM only considers NPC actions in a very local level. In the second category, each instance is around 6-10 hours. GM can consider NPC actions throughout the settlement or in the wider vicinity in nature when it comes to whether or not they start interacting with the situation players are part in. The largest time scale is long actions considered to be taking like a week or 2. These can be sailing to some place far away, travelling some place far away on foot, smithing, really proper long rest, construction, building defenses for an upcoming siege etc. etc. In this time scale the activities of all actors in the campaign are considered, and they move forward in their strategic plans.
3. Interacting with the world, lore, and caring about the minute details of the world should be rewarded, role playing should be rewarded.

Running the game

The general openness of role playing games apply here as well. Players can do anything in the game world, that makes sense for GM and other players. In a way role playing is collaborative sense making. GM describes the environment, how NPC-s react to PC-s, and answers various clarifying questions to the players. Players describe how their character behaves, what is their intent with considered actions, and whether or not they do those considered actions.

When operating within the game world, players need to spend time and effort. Also, some actions may not be guaranteed, in this case there needs to be a resolution mechanism. IN 6d6 we use again, our 6 d6s.

Resolution mechanism:

1. First the general idea of what players want to achieve and the time scale they want to operate in is agreed. Everyone roll their 6 dice as usual.

2. Things that GM needs to resolve are:

* Can an activity be done within the agreed upon time-scale. * If an activity can be done within a smaller time-scale, do we play it through or just assume that it succeeds to a result, which suits both players and GM * How much time and effort does an action / activity take? This is measured between 1 to 6 dice. * Is it possible to fail the action / activity. What would it look like? What would complications regarding the activity look like. * If yes, then how difficult should the action /activity be. * Can there be complications? * Can there be boons as extra bonuses? Recommended to only consider these in special activities. Not all things need boons. Skill check rules:

GM decides Effort E and how many dice he rolls to decide to determine the what result beats the challenge.

* Difficulty is average, then the number of dice rolled is equal to E and challenge is represented as E / E

* Difficulty is above average then the number of dice rolled is larger than E, and the E largest results are chosen to become the challenge target. Challenge is represented as "E / D hard" where D is the number of dice. * Difficulty is below average, then the number of dice rolled is larger than E, but the lowest E results are chosen to become the challenge target. Challenge is represented as "E / D easy" Example:

GM says that the challenge is "3 / 5 hard". That means the attempting player has to present 3 dice, then GM throws 5 dice and chooses 3 largest values, then they are compared with the player's dice and if all player dice are larger or equal to the challenge dice, then it is a clean success. For each dice that the presented dice is only 1 lower than challenge dice, there can be either 1 complication per such dice, or a one suitable bigger complication for all such dice, but otherwise the challenge is still considered as success and players get what they want with a "BUT". In all other cases challenge fails, and complications are handed out as appropriate.

Player interactions with the skill difficulty

* Players can use their proficiency to nudge the presented dice to be higher than they are. Normal proficiency rules apply. Proficiency is used before comparing but after the presented dice and challenge dice are decided. * Players can invoke some elements in the world, or by explaining why they should have an advantage, or roleplay, to nudge the difficulty by 1. Hard difficulties can be nudged multiple times, until they are average. Average and easy difficulties can be nudged once this way. For really hard difficulties, some roleplay aspect could nudge it more than 1 dice, for example when difficulty is "6 / 20 hard", then it could reduce it to 6 / 18 or 6 / 17 immediately. * Players can push the challenge by spending dice to reduce the difficulty by 1. That does reduce the number of dice available for them for this campaign turn * Players may assist other players by spending dice to reduce the difficulty by 1. When assisting however, the assisted dice has to at least a 4. Assisting player can use their proficiency however to achieve that condition. Terms:

* Challenge - an activity or action that players do in order to achieve a goal they set out. * Effort - number of dice needed to be presented for a challenge * Difficulty - Represented either easy, average or hard and by the number of dice the GM throws. * Easy difficulty - GM throws more dice than effort E, and chooses the smallest results for challenge dice. * Hard difficulty - GM throws more dice than effort E, and chooses the largest results for challenge dice. * Presented dice - Effort number of dice that player presents, which are then checked against the challenge dice to determine success, success with complications or failure. * Challenge dice - The final Effort number of dice that GM rolls based on the difficulty. * Comparing - Each dice from presented dice is compared against the corresponding Challenge dice. Highest dice from both sides are compared first, then second, third and so on. * Success - Each presented dice is equal to or higher to the compared challenge dice. * Success with complications - Each presented dice is equal or higher than the compared challenge dice minus one, and some of them are equal to challenge dice minus one. * Failure - Some dice is smaller than challenge dice minus 1. * Success with boon - Each presented dice is equal to or higher to the compared challenge dice + 1, then it is considered success with a boon. Not all challenges can have a boon. But for those that do, proficiency can be used to increase the presented dice to 7 if necessary.

Skills

The struggle I had is to think of Skilled path feats and abilities. The problem there is that, they are supposed to be strong in the most creative part of the game, out of combat roleplay. The thing is, that part really should not be constrained by making a finite set of feats or moves or what not as the vastness of play in TTRPG is impossible to support with this approach.

What I want to achieve is players to both unleash their creative potential when creating characters, while at the same time willingly limit what their characters can do, constraints are fun, as long as you have enough tools to figure out a way.

So what I am leaning towards, is a creative way to say, that your character has a particular background, or a particular set of skills, or knows how to do something very specific and unique.

So, in addition to basic skills like physique and leadership, there are limitless number of creative skills, which players can gain proficiency in, and can also invoke in their adventures. But how to go about making these skills?

How to make sure they are balanced, both in the sense that they are not too obscure that never come up, and also that it wouldn't cover pretty much every single situation?

For that there are some guide lines for how big of a scope could a such a skill have:

1. Each skill is related to a specific ability (see glossary). This also constrains the nature of the skill. For example if your creative skill is working in a trading caravan. If the related ability is social, then you can use it to negotiate or barter intensely. If however the related ability is intelligence, then perhaps you know all the trade routes and what kind of goods are moved around. If the related ability is cunning, then it could explain your ability to spot ambushes, or spot scams, understand when some piece of item is fake etc.
2. It could be the core skill sets required for a profession, in this case, the skill set would be trading, blacksmith, city guard etc. In this case you could use the proficiency of this skill set to do activities that these jobs would do daily. You could try to invoke it with a dis-advantage for situations, which can come up during the line of work, but are not the main activity. For example if you are a trader, you negotiate a lot, but that doesn't mean you know how to negotiate with nobility, it also doesn't mean you could convince someone to aid you for no money. But you would be able to buy anyone's services who is interested in money, and use your proficiency to barter the best price. As a blacksmith you know how to forge weapons and armor, but couldn't craft leather, or you might be able to negotiate and barter your raw resources and for the price of your own craft, but not other things.
3. It is limited to a terrain type or certain cut of society. Like for example, you could be expert in the wild, but you would be only expert in terrain familiar to you. For example, you could separate different major terrains as desert, steppes, forests, mountains and sea. It can also be differentiated by the social class with whom you interact with: nobles, religious, artisans, commoners, criminals. The exact relevant social classes may vary from culture to culture and depend on the setting, and same with terrain, talk it through with the GM.
4. It is tied to a certain culture. For example, you have read a lot of books, but only from a certain culture. So you can only know what that culture knows. You may know vaguely about heroes or happenings of other cultures, but even then you would only know about them from the perspective of that culture.
5. It is about specializing. For example, you are a sword blacksmith, you have studied all the swords from all around the world, and can therefore make the best swords. Or you have specialized in a topic, such as warfare logistics, and therefore you have read texts about it and know about from different cultures also from their perspective. Or you could be a magical spice merchant, so you would know where this is grown, where there is high demand, can tell the quality, fakeness of the spice and so on and on. But by specializing you would limit yourself to not be able to do adjacent stuff or have a

significant disadvantage doing so.

General rule of thumb is that, each trait should consist of a profession / background / general character wibe, that would allow it to be invoked in various situations, and at least 1 limitation (in addition to being constrained by an ability), that would give it more character.

The limitation may make some things that the trait could otherwise allow to make it impossible, or make it so, that you can attempt to do those things with disadvantage or severe disadvantage.

Examples of traits + limitation:

1. Trader (profession), limitation examples: spice merchant, deals with stolen goods in the underworld, has been leading caravans over desert.
2. Grew up helping his father hunt (back ground), limitation examples: In forest, In mountains, Specialized in traps.
3. Has read a lot of books and knows stuff, limitation examples: Books made by specific culture, Books about magic, Only the most obscure and rare books.

Also, when it comes to learning new skills during the campaign, it is also limited by the fact weather or not you can do the activity. So you cannot all of a sudden become a trader while you do 0 trading during your journeys. You could however read a whole bunch of books and become an theoretical expert of Dragons.

Each character starts the game with already 2 preexisting traits, And both of them have at least +1 proficiency, as stated in creating your character chapter.

General actions

Move

Difficulty: RX	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Physique

Move X squares where X is the dice result that you use to move. This action can only be taken twice per turn.

Defend

Difficulty: R2.R2	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Physique

Recover your defense up to maximum defense

Refocus

Difficulty: R1	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Intelligence

Remove a level of disoriented or afraid from you.

Difficulty: R1.R1	Use limit: unlimited	Remove all levels of that type from you
--------------------------	-----------------------------	---

Recover

Difficulty: R6	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Toughness

Remove a level of poison or all levels of unbalanced

Difficulty: R6.R6	Use limit: unlimited	Remove all levels of that type from you
Difficulty: R6	Use limit: unlimited	You can remove freezing instead of poison

Study opponent

Difficulty: R4	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Cunning

Study one of the opponents and learn their HP / ATK / MV if they are mobs, or Toughness, Defense and one ability if it is enemy hero.

Difficulty: R4.R4.R4	Use limit: unlimited	Find a vulnerability for the particular opponent, describe what this is, that opponent has 1 vulnerability that is not discarded at the beginning of their turn
-----------------------------	-----------------------------	---

Taunt

Difficulty: R2	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Social

Taunt one opponent, they are more likely to attack you, but if they don't, they have disadvantage

Difficulty: R2	Use limit: unlimited	Target also loses 1 morale
-----------------------	-----------------------------	----------------------------

Mark enemy

Difficulty: R3.R3.R3	Target: -	Range: -	Area radius: -
Action cost: -	Duration: -	Concentration: NO	Proficiency: Social

Mark an enemy, attacks and spells against him have advantage.

Difficulty: R2	Use limit: unlimited	Target also loses 1 morale
-----------------------	-----------------------------	----------------------------

Wrestle

Difficulty: R2.R2	Target: -	Range: -	Area radius: -
Action cost: 1 stamina	Duration: -	Concentration: NO	Proficiency: Physique

Wrestling is all about getting an upper hand, rooting the opponent in place and draining their stamina faster than you lose stamina. There are a few rules for wrestling:

1. If someone has upper hand against you, then you must first get rid of it before you can get upper hand against them
2. If anyone has upper hand against you, you cannot move
3. If someone gets upper hand against you, you lose upper hand against everyone.
4. Normally 1 character can only have upper hand against 1 other character
5. Upper hand has multiple levels.
6. When someone has upper hand against you, you cannot use weapons, except for dagger and you can only use spells that have a range of touch or target yourself.
7. When you have 3 levels of upper hand against you, you cannot even use the dagger, nor cast spells that touch.
8. You lose 1 stamina at the beginning of round, if you have at least 3 levels of upper hand against you.
9. If someone has upper hand against you, you can only wrestle those who have upper hand against you.
10. Character which has upper hand against another character is considered to be in the same space (same square in battle map)
11. Ranged attacks made onto a character in the space where the wrestling is taking place has a 1/6 chance of hitting the other person.

Difficulty: R2.R2	Use limit: unlimited	Gain one additional level of upper hand
--------------------------	-----------------------------	---

Foundations

Foundations are the second thing after choosing paths that players choose when creating a character. They grant unique often build defining powers, that significantly define the wibe and nature of your character. Foundation powers are not available later in the level ups. You get a foundation for each path you have assigned a point into. However if you have put more points into the path, then the foundation is that much stronger. In addition, if you are of some unique race, which would be able to for example have dark vision, or flying or something else, then refer to the races foundations. When taking one or more race foundations you must give up a foundation in one of the paths. The power of the racial foundation depends on the level of the path, which foundation you gave up.

Finally I added one background foundation, and may add more in the future. These can also be replaced by one of the path foundations similarly to racial foundations.

Racial

Extraordinary senses

Acquainted: You can see 6 sq. in the dark, and 12 sq. in low light

Adept: You can see 25 sq. in the dark and 50 sq. in low light

Talented: In addition you have blind sight in 2 sq around you.

Legendary: You can see in the dark as well as in the light. You have blind sight in 6 sq around you.

Wings

Acquainted: You don't take any falling damage as long as you are wearing light armor.

Adept: You don't take any falling damage as long as you are wearing light armor and are not carrying more than 1/5th of your carry weight, and when falling from great heights you can glide, falling 6 sq. per round and moving 6 sq. per round at any direction.

Talented: You don't take any falling damage. If you are wearing light or no armor, and are not carrying more than 1/5th of your carry weight, then you can fly as your move action. If you do, move 2 less squares.

Legendary: You don't take any falling damage. If you are wearing light or no armor, and are not carrying more than 1/5th of your carry weight, then you can fly at your move speed.

Natural armor

You can only have the maximum defensive benefits from the armor you wear or this foundation, they do not stack.

You can lower the bonus of the natural armor by 2 to receive the no armor bonus.

Acquainted: Your maximum defense from natural armor is 2.

Adept: Your maximum defense from natural armor is 3.

Talented: Your maximum defense from natural armor is 4.

Legendary: Your maximum defense from natural armor is 5.

Natural armor bonus increases by 1 at levels 5 and 10

Also when you are talented or legendary, then you get the option to take the heavy armor penalty (cannot take both this and no armor bonus) in order to get 1 damage reduction. This increases to 2 damage reduction at level 5 and to 3 damage reduction at level 10

Claws

Requires: Adept

You have claws. They can be used to attack. They use claw proficiency (physique) which can be upgraded using either Martial path or the path which foundation is replaced by this one.

Adept: You have claws which enable you to do a simple claw attack when unarmed. They use claw proficiency and R2 as the power dice. Check the claw statistics under equipment.

Talented: Your left hand claw uses R4 as the power dice, check the secondary claw statistics.

Legendary: Your claw proficiency is not shared between the two hands.

Four hands

Requires: Legendary

You have four hands, meaning you can hold 4 one handed items, 2 two handed items or any combination in between.

Extreme temperature tolerance

Requires: Talented

Choose either fire or cold. If you choose fire, you are immune to fire damage and burning condition. If you choose cold, you are immune to cold damage and freezing condition.

Legendary: Choose both of these options.

Strong mind

Requires: Adept

You have immunity to afraid condition.

Talented: In addition you have immunity to disoriented condition

Legendary: In addition you cannot be confused or disrupted.

Poison secretion

Requires: Talented

You are immune to poison. You naturally produce poison when stressed in battle. When picking this innate feat, choose the type of poison you make: * 1 damage at the beginning of each turns per stack * 1 levels of disoriented per stack * 1 levels of afraid per stack. When Legendary, you have one additional option: * 1 level of freezing. To apply this poison to your next attack with weapon or bow, you need to spend a R4. You can do that at most once per turn, and this applies only 1 stack.

If you are legendary you can instead spend R4.R4 to apply 2 stacks to the next attack with weapon or bow.

Background

Royalty

Requires: Legendary

You belong to one of the well-known houses in the realm. That grants you access to places commoners don't have access to and guards and many other officials are more forgiving for various problems you may cause. You start the game with 2000 additional gp. and always have a castle to stay in at least one of the major cities. But in most cities there is often someone who is willing to host you for free in a very quality lodging (another house member, allied house member, simply someone who wants favor from your house etc.)

Mage

Metamagician

Requires: Talented

When learning a metamagic feat, learn a metamagic feat of same or lesser power. You can apply 1 level of large or distant magic to a spell for free without increasing the dice cost or metamagic limit.

Shifter

Requires: Adept

You have a beastly form, that levels up as you do. In the beastly form, you cannot speak, don't benefit from any of your normal form advancements in any path, but you can level up using the beast path (used to make all the mighty beasts in the game). The level of your beastly path is equal to your magic path. Beastly form has the ability to turn back into your regular form. To turn into your beastly form you need to spend 1 mana per your character level and if you are in combat then also meet R5.R5.R5 roll target using nature magic. Your equipment merges into your body and loses it's magical effect until you return to your normal form. Scarred, damaged and wounded dice carry over when transforming to and from the other form.

Divine protector

You can advance toughness instead of will using mage path. You can transfer a scarred dice from an ally to yourself (their scarred dice becomes normal, 1 of your normal dice become scarred) twice during a strategic turn, while being outside of combat. When your mage path is talented, When a dice would become scarred, roll it. On a 6, it stays normal. When your mage path is legendary, then it also doesn't become scarred on a 5 as well. This effects also the dice you transfer from allies to yourself.

Raw caster

Requires: Talented

You cannot cast concentration spells, or spells which cast time is greater than 1 round. You also cannot initiate rituals nor spend your mana for rituals. Reroll the dice that you used to cast the first spell during the combat and return them to the dice pool. You do not reroll any virtual dice you gained by using mana or through other means. Recover that ability at the third, sixth and tenth round of combat.

Duality

Requires: Talented

Choose 2 schools of magic with different power dice values. You can only learn those two schools of magics. You share the proficiency between those schools of magics (you need to progress only once, and spells from both of the schools share proficiency using during combat and scenes).

The school with the lower power dice is called the lower school, and the other one the higher.

You can use the power dice from both schools to cast either school spells as long as the balance wouldn't tip by more than 2 into either direction because of doing so. Outside of combat you can only use it once per turn.

When you spend a lower school's power dice to cast higher school spells your balance tips towards calm, and if you spend higher school's power dice to cast lower school spells your balance tips towards rage.

While at maximum calm you cannot be disoriented, while at maximum rage, you are immune to afraid condition.

Savant

Requires: Adept

Choose 1 school of magic, you can only cast spells from that school of magic, and you can only gain proficiency with that school of magic. Proficiency advancement options all have (max prof. 4) when advancing this school of magic.

If you are talented or legendary in the Mage path, then you always get a free virtual power dice when casting spells from that school.

Mana born

Requires: Legendary

You are a mana based being, even though you still have the humanoid form. You don't have blood and you only need to consume mana infused foods. Each normal day of living uses 1 mana (or 1 medium turn, a normal strategic turn would spend 5 mana). In addition you can store mana in your dice equal to toughness amounts of mana per die.

You don't have life, instead whenever you take damage you lose mana. You can give up your dice for toughness amounts of mana and recover those dice for toughness amounts of mana. Meaning you can basically heal with the pace of recovering mana. Whenever you have no mana, you die.

You have no blood, you are immune to poison. You cannot be healed using heal spell or healing potions, since you don't lose dice, you simply release the mana stored in them as you need more mana, dice cannot become scarred.

You start the game with having maximum mana, and all your normal dice are fully stored with mana.

Martial

Warcaster

Requires: Legendary

You can use stamina instead of mana for spellcasting during combat. You cannot use stamina to cast spells outside of combat or for rituals.

Enduring

You start with 1/2/3/4 additional maximum stamina depending on the level in martial path.

When you are at least talented you also recover 1 stamina every round during combat. When you are at least legendary, then you recover 1 additional stamina every second round during combat. Recovery happens during the rerolling of your dice pool.

Mastery over body

Requires: Legendary

Your body is your weapon. You have made a vow to give up using weapons, armor and magical items, instead you have focused in making your body a supreme weapon. At levels 1, 4, 8 and 12 you get to choose an additional major option from your martial playcard (this option does not spend a check-box on the talent card), but you cannot use weapons, shields, armors nor attune to any magical item.

In addition your unarmed strikes do 1 additional damage and you have 1 bonus maximum defense. Both of those bonuses increases by 1 at levels 3, 6, 9 and 12.

Bulwark

Requires: Talented

Enemies within 3 sq. of you that attack your allies have disadvantage. If they already would have disadvantage, it becomes double disadvantage.

If you are legendary in martial then you can spend stamina and mana to reduce damage taken by 1 per stamina or mana spent to you and you can use luck to reduce damage dealt to you by 3.

Defiant

Requires: Talented

When your martial path is talented, When a dice would become scarred, roll it. On a 6, it stays normal. When your martial path is legendary, then it also doesn't become scarred on a 5.

At the beginning of each round, for each die that was damaged for the first time this combat since your last turn choose 1 of these options:

- * Heal 1 damaged die and recover 3 stamina. This healing does scar a die though.
- * Deal 3 additional damage with one of your attacks this turn.
- * Roar, all enemies within 4 sq. radius get 1 level of afraid.

Nimble

Requires: Legendary

After using dice to move, dodge or recover defense, you can reroll those dice back into your dice pool. Up to 2 dice can be reused this way per round (this resets when you reroll your entire dice pool). This increases to 3 dice at level 6 and 4 dice at level 12.

Tough

Requires: Talented

If you are talented, then every turn negate the first damage you receive. If you are legendary, then negate the first 2 damage you receive. This ability resets during the round if one of your dice loses all it's HP.

Natural killer

Requires: Adept

When you damage an enemy first time this combat with a weapon, gain a blood token that can be used during this encounter. Against enemy heroes, if they use defense action, then you can get blood token another time. If you are talented or legendary, whenever you gain at least one blood token, gain one additional one.

Once per round, whenever you make an attack, you can use one and only one of those options once to boost that attack:

* spend 1 blood tokens to gain advantage or upgrade advantage to double advantage * Spend 2 blood tokens to gain double advantage * spend X blood token to deal X additional damage * spend 1 blood token to disrupt 1

Anti mage

Requires: Talented

You cannot be the target of spells (including those of your allies), nor can you cast spells, nor can spells have any none-damaging effect on you. When you attack a spell caster, they lose 1 mana for every 3 unmitigated damage (that damages their dice)

Skilled

Wild magic

Requires: Legendary

You can cast any spell not requiring concentration using 1 luck token, even if you do not know that spell. For spell schools which power dice is either 4, 5 or 6 the power dice to use this ability becomes 6 and the utility dice becomes 5. For spell schools which power dice is 1, 2 or 3, the power dice to use this ability becomes 1 and the utility dice becomes 2. This ability uses wild magic proficiency, which you can advance instead of advancing in any school of magic or skill. Each spell can however only be used once using this ability until your next "Time out and recover".

Specialist

Choose 1 skill. You have an extra +1 for that skill's proficiency. Note it does not increase the max of acquiring proficiency with this skill using normal options and therefore allows the skill to potentially reach +5 proficiency. If you are talented or legendary, you can choose two skills instead.

Lucky

When you spend a luck token, you can choose 2 of the options instead of only 1. If you are talented/legendary in skilled path increase your maximum number of luck tokens by 50 %.

Good fortune

You can allow other party members to use your luck tokens. If you are talented/legendary in skilled path increase your maximum number of luck tokens by 50 %.

(Wo)Man of many talents

Start the game with one additional "creative skill", which has a proficiency of 1. If you are talented/legendary in skilled path, start with one additional "creative skill" with a proficiency of 2.

Prodigy

Requires: Adept

From level 1 you can pick one major option from your skilled lvl 1-4 playcard and that does not forbid you to take that option again. (meaning you could for example take 2 major skilled feats by level 2 as Talented or Legendary in Skilled path). Repeat this at levels 5 and 9.

Well connected

Requires: Talented

Whenever you need some service, vendor or someone who knows stuff there is a chance you know someone in the current location who could help. In cities it is 50 % chance, in towns it is 25 % chance, in hamlets it is 10 % chance. Just because you know someone doesn't mean that they provide that service for free. They may have a positive disposition and maybe provide a small discount, but that is up to GM-s discretion.

Daredevil

Requires: Adept

Whenever you succeed with complications, you recover 1 luck token. If you are talented or legendary, then you recover 2 luck instead.

Feats

Feats in this chapter are gained using your level up advancement points. Feats are spread out between the paths. For example mage feats can only be taken using mage advancement points. Mixed feats can be taken by combining the 2 path advancement in any way you like.

Mage

Adept attuner

Feat level: small

You can attune to one additional magical item

Distant magic

Feat level: small

Roll: Rp	Use limit: unlimited	Increase spell distance by 6 sq. or double it, whichever has greater effect
-----------------	-----------------------------	---

Enduring magic

Feat level: small

Roll: Rp.Rp	Use limit: unlimited	Can only be applied to none ritual concentration spells. Increase their duration by 2 rounds or double it, whichever has greater effect.
--------------------	-----------------------------	--

Large magic

Feat level: small

Roll: Rp	Use limit: unlimited	Increase area of effect spell's radius by 1 sq.
-----------------	-----------------------------	---

Fire and ice

Feat level: medium

When burning or freezing applied to enemies by you cancel out the previous freezing or burning stacks, the enemy takes 5 damage for each stack cancelled out this way. This bypasses defense and damage reduction.

Hex master

Feat level: medium

You can apply max 2 hexes on a creature instead of only 1

Improved Ritual master

Feat level: medium

Requires: Ritual master

You are more skilled at including others in your rituals. Nobody who joins your ritual has disadvantage, even if they don't know the ritual.

Mana siphoner

Feat level: medium

Requires: 4 proficiency in arcanum

Spice specialist

Feat level: medium

Talented attuner

Feat level: medium

You can attune to one additional magical item

Terrifying flames

Feat level: medium

Whenever you apply at least 3 levels of burning onto an enemy with a single spell, also apply 1 levels of afraid

Twin magic

Feat level: medium

Roll: Rp.Rp	Use limit: 1	Cast the spell twice. You may choose new targets for second cast. Concentration spells share concentration for both casts but increase concentration cost by Rp.
--------------------	---------------------	--

Zealed magic

Feat level: medium

Requires: 3 proficiency in arcanum

Roll: Rp.Rp	Use limit: 1	This makes the spell you cast harder to be countered or dispelled. The cost to counter the spell is doubled and when calculating the base cost include the 2 power dice spent on this meta-magic option. This metamagic option can also be used for rituals, but in this case the cost of the zealing goes up by 1 Rp for every 4 initial cost of the ritual (rounded down). So a ritual that costs 10 x Rp would require 4 (2 initial + $10 / 4 = 2$)
--------------------	---------------------	---

An useful pet

Feat level: major

Requires: Talk with animals spell

You have a pet that is useful both in combat and outside of it. Choose a physical form, and then a out of combat ability:

Physical forms:

The pet is a small creature, either flying, or jumping around, they are super agile and so enemies usually cannot hit them easily and therefore ignore them. AoE abilities still knock them out. In combat, they can be ordered to disrupt one enemy each turn. Small pet has 1 HP.

The pet is a large predator who acts like a minion meaning they always do fixed damage of 2 and have fixed HP of 5. Their downside is that they can be taken out by the enemy.

The pet is a mount, who you can ride on. In combat whenever you use a dice for movement you can move 2 extra squares. The mount has 6 HP. When you or the mount are attacked you can choose who defends the attack / takes the damage. AoE effects still effect both of you.

When a pet is knocked out, they require time, care and 20 gp worth of medical herbs to fix them up. If they are knocked out but take additional damage, either because the enemy is sadistic or there is some AoE damaging effect, they die, and your character is devastated by the fact. However it is possible to find a new pet over time as you get over it.

Outside combat bonuses. Choose 1 for the pet:

1. Outside combat you have advantage for survival checks when detecting ambushes, traps and other threats.
2. Outside of combat they give you advantage when tracking or chasing someone.
3. Outside of combat the pet increases your prestige, and thus can give you an advantage in diplomacy checks where appropriate.

Battle mage

Feat level: major

The mana cost for offensive spells scales better. It now costs 2 mana for 2 additional power dice, 4 mana for 3 additional power dice and 6 mana for 4 additional power dice

Blood magic

Feat level: major

This feat can only be taken by those who have blood in them, so Mana born for example cannot use blood magic.

You may spend your life points the same way you can spend your mana to get virtual additional dice, these dice however do not require the base mana to be used. By doing that you take damage directly to your life bypassing defense and any damage reduction. For 1 damage reduce the spell cost by 1 dice, for 2 damage, by 2 dice, for 4 damage by 3 dice and for 6 damage by 4 dice. You can combine this with mana, and the maximum reduction using your life points is equal to your spell school proficiency. However the combined total reduction with reduction from mana is your proficiency + 2. So if your proficiency is 4, then you could spend 6 life points and 3 mana to reduce the cost by 6 dice, but you cannot spend 6 life points and 6 mana to reduce it by 7 any more.

Dimension mastery

Feat level: major

Requires: 3 or more dimension proficiency

When taking this feat you craft an object, a talisman of sorts, which, while you are attuned to it, you can cast spells from the point of that object. If you are legendary in dimension magic, you can craft one additional such object. Crafting the second one however costs 1000 gp.

Enchanter

Feat level: major

Enchantment spells that buff weapons cost 1 less power dice to cast. When the concentration cost is higher than 1 power dice, then that too costs 1 less power dice.

Fire mastery

Feat level: major

Requires: Pyromancy

Whenever a stack of burning is removed that was applied by you, gain a temporary flame token that lasts until end of combat. You can spend flame tokens to fuel your spells and attacks:

3 Flame tokens: Apply burning on one of the target's of the spell or attack

5 Flame tokens: Remove a negative status effect or curse from yourself and move it onto the target of the spell or attack.

7 flame tokens: At the end of your attack or spell remove all stacks of burning from the target dealing 3 damage per removed stack. If that kills the target, refresh your dice pool. The cost of this ability increases by 5 flames for the duration of this encounter.

Holy bonds

Feat level: major

You can attune to any number of your party members instead of items.

Whenever attuned party member receives a negative status effect you can instead move it to yourself.

For spells which the target is self, you can instead cast it targeting one of the attuned party members.

The maximum range for these spells becomes 5 sq.

Other spells targeting attuned party members have advantage

Iron concentration

Feat level: major

You can spend any dice to maintain concentration

Pyromancy

Feat level: major

Whenever your spell applies at least 1 stack of burning onto an enemy, it applies one more stack of burning onto them.

Ritual master

Feat level: major

You are more skilled at including others in your rituals. All casters who join your ritual, their effective proficiency for the ritual is at least your proficiency minus one.

Will breaker

Feat level: major

As you apply afraid onto enemies, your ability to effect the battlefield becomes increasingly stronger based on the total levels of these conditions that you have applied during this combat

At least 1 levels per remaining number of enemies: Enemies with afraid cannot attack you and have their damage reduced by 1 for each level of afraid.

At least 3 levels per remaining number of enemies: Enemies with afraid get disadvantage to refocus action. Mobs recover from afraid twice as slow.

At least 5 levels per remaining number of enemies: Enemies with at least 2 levels of afraid will stop fighting and just fall prone and give up. This may not effect enemy heroes, but in this case the enemy hero gets double disadvantage for all their spells and attacks.

At least 7 levels per remaining number of enemies: All your allies gain double advantage with all their offensive spells and attacks.

Martial

Defensive stance

Feat level: small

If you have not attacked or cast an offensive spell since the beginning of your last turn you have an additional +2 maximum defense while guarded.

Fortress

Feat level: small

Requires: Heavy armor proficiency

You can use toughness proficiency for refocus action.

Kick

Feat level: small

Kick is a special unarmed move. You may be wielding weapons. It does use a unarmed (mental) slot.

Base cost:   	Proficiency: unarmed	Other costs: -
Target: -	Duration: -	Limit: -
Restrictions: -		
Deal 2 damage, Push an enemy 2 squares and apply 2 unbalanced		

Difficulty adjustment options:

+ 	Send them flying 2 additional squares and have them take 2 more levels of unbalanced
+ 	+1 damage

Medium armor proficiency

Feat level: small

Remove the penalty of -1 physique proficiency when wearing medium armor

Power strike

Feat level: small

When making an attack with 2 handed melee weapon you can spend 1 stamina to deal 2 additional damage. This can be used once per turn.

Prolonged rage

Feat level: small

Requires: Rage

Your rage lasts 3 additional rounds, or 2 additional rounds if wearing heavy armor.

Toxicologist

Feat level: small

When drinking potions, only every other potion adds an R3 to fortitude checks for drinking potions instead of every potion. You have +1 to proficiency against poison, and +2 proficiency to fort saves against alcohol.

Backstabber

Feat level: medium

When attacking someone with a one handed melee weapon from behind or while the opponent is unaware of your presence, you have double advantage.

Dodging

Feat level: medium

Whenever you would receive damage you can react with a R5 physique dice to negate that damage. This cost goes up by 1 X R5 every time you use this ability during encounter. You can take the recover action to reset it to 1 dice again.

Dodging requires no or light armor

Base cost: 	Proficiency: physique	Other costs: -
Target: self	Duration: -	Limit: -
Restrictions: -		
reset the dodging reaction dice cost to 1 dice		

Heavy armor proficiency

Feat level: medium

Wearing heavy armor only applies a -1 physique proficiency penalty instead of -2

Menace

Feat level: medium

When you damage an enemy with a melee attack, then until the start of your next turn, they have disadvantage when attacking your allies

Opportunist

Feat level: medium

You have advantage with attacks against enemies that have damaged your allies but not you since the end of your last turn.

Shadow

Feat level: medium

You are able to take maximum advantage of disoriented foes. Foes who have at least 1 level of disorientation, have disadvantage for attacks against you. You have advantage with attacks against foes who have at least 2 levels of disoriented. When taking a move action, then one target creature with at least 2 levels of disoriented loses track of you and become unaware of your presence.

Shielder

Feat level: medium

When an ally gets damaged, who stands next to you while you are guarded, you can use your defense to mitigate that damage.

War shout

Feat level: medium

You can spend a pair of either R4 or R5 to make a proper shout, that would apply 1 level of afraid into all enemies within 4 sq. of you, or a pair of R6 to make an even more powerful bone-shattering shout, that applies 1 level of afraid into all enemies within 2 sq. of you and 1 additional level of afraid into enemies within 5 sq. of you. Each pair (R4, R5 or R6) can only be used once per combat. There is no proficiency that can be used to achieve these pairs, they have to be rolled naturally.

Blessed warrior

Feat level: major

Increase your maximum defense by 1. Whenever you hit an enemy with an attack involving at least 4 power dice you may choose up to 2 options:

- * remove one level of negative status effect from you or one of your allies.
- * recover 1 stamina
- * spend 1 mana to deal an additional 2 damage. (requires mage path)

Commander

Feat level: major

Leadership becomes a martial skill.

Gain the coordination action.

Base cost: 	Proficiency: leadership	Other costs: -
Target: One enemy	Duration: -	Limit: -
Restrictions: -		
Once an ally damages the targeted enemy all other allies gain advantage for all attacks and spells targeting that enemy and that enemy gets 1 levels of vulnerability. This lasts until the end of turn.		

Difficulty adjustment options:

+ 	Once two allies have damaged targeted enemy, all other allies gain double advantage for all attacks and spells targeting that enemy.
---	--

Deadly dagger

Feat level: major

You are able to maximize advantages gained, when attacking with a dagger.

When you attack with a dagger while having advantage, ignore damage reduction and deal 1 additional damage.

When having double advantage, ignore damage reduction, defense, and deal 1 additional damage per power dice used in your attack.

Fury

Feat level: major

Requires: Rage

When raging then enemies within 5 sq. of you who choose to attack someone other than you or someone else who is raging suffer 1 confusion. When you are damaged, then for every 2 points of damage rounded up, you gain 1 fury token. When successfully hitting an enemy you can spend any number of fury tokens to add following buffs to that attack:

* 1 damage per fury token. If you have proficiency in elemental school of magic, you can convert all your physical damage into fire damage.

* 1 confusion per fury token.

* Push them away from you forcing them to check for unbalanced for each fury token. The push distance is 1 sq. per fury token used this way.

Hex arrow

Feat level: major

When taking this feat, choose a {hex spell} Whenever you hit an enemy roll 1d6+1, if the sum is lower than the damage you dealt with this attack also apply chosen hex or a hex spell you know onto that enemy. No concentration is required to maintain that hex.

Master of defenses

Feat level: major

Requires: lvl 5.

Defend action now requires only R2. You can also use Defend action as a reaction once between your turns after being attacked. +1 maximum defense

Rage

Feat level: major

Gain rage action.

Base cost: 	Proficiency: toughness	Other costs: -
Target: self	Duration: 5 rounds	Limit: once per encounter
Restrictions: -		
You go into rage where you stay for 5 rounds or until you go unconscious. If you are wearing heavy armor, rage lasts for 2 fewer rounds. While raging you are immune to confusion and disruption. You lose all your defense and cannot recover any defense. However you still roll all the dice that were set aside because of damage and scarred dice work as regular dice.		

Savage Axe

Feat level: major

You gain 1 savagery token per stamina spent. These tokens must be used in the current round. When you attack with an axe you can spend savagery points to deal 1 additional damage per savagery point.

You gain additional difficulty adjustment options for two handed axes:

Rp: Spend 2 savagery tokens to add a level of afraid to the enemy

Rp: Spend 2 savagery tokens to add 1 level of vulnerable to the enemy.

Sentinel

Feat level: major

When wielding a polearm, you get a zone of control around you of 2 sq. Enemies that want to move through your ZoC or want to enter within 1 sq. of you need to provide a R6 physique roll in order to do that. When a pawn enters your ZoC they end their turn, when rook or knight need to pay R6 then they do, but they end their turn after finishing the maneuver, bishops don't enter your ZoC. When a rook ends their turn next to you, the sentinel feat becomes disabled.

Enemies entering your ZoC give you a attack reaction opportunity.

First reaction attack with a polearm in between your turns has double advantage, the rest have simple advantage.

Sword mastery

Feat level: major

You master the sword, using it to parry, create threats and protect yourself. You control it perfectly both when assaulting and defending.

When you take damage into defense from a melee weapon attack, deal 1 damage for every 2 damage received to defense, rounded up.

When you attack, recover 1 defense for every power dice spent in the attack.

+1 maximum defense if wielding a two handed sword, sword and a shield or 2 swords.

Two weapon fighter

Feat level: major

Your maximum defense is increased by 1 while wielding two weapons. When wielding two melee weapons which sum of power dice is less than or equal to 6, then you can use R6 from your dice pool as a power dice for attacks with both weapon.

Two weapon master

Feat level: major

Requires: Two weapon fighter

Whenever you attack with both weapons in a round you gain a flow token.

You can use the flow tokens in following ways, flow tokens are reset to 0 at the end of an encounter:

- * When you would get a level of negative status effect, you can spend a flow token to prevent that.
- * Spend 2 flow tokens to instantly go to your maximum defense
- * Spend 1 flow token to move yourself up to 2 sq. after finishing an attack action.

Skilled

Deep apology

Feat level: small

When your or your parties past deeds cause a diplomacy challenge to become harder, then once per NPC, you can offer a deep apology to reduce the penalty (exact reduction is still decided by GM).

Foresight

Feat level: small

Base cost: -	Proficiency: -	Other costs: -
Target: -	Duration: -	Limit: -
Restrictions: -		
Once every time after visiting a settlement with shops, you can take out a common item from your backpack, which you as a player actually had not bought from the settlement, but consider it having been bought (subtract the gold cost of the item from your balance).		

Knowing when to shut up

Feat level: small

When failing a diplomacy challenge, there are no additional complications because of it (compared to not doing the challenge at all).

Expert of sacrifice

Feat level: medium

Requires: 3 proficiency in any social skill

If any challenge would fail within the party, you can offer a dice to negotiate with GM something that you as a party will need to give up, in order to remove one challenge dice. It can be only used if removing one challenge dice could make it a success.

Insightful

Feat level: medium

Whenever you spend at least 3 dice for lore related activities, you can ask a single yes / no / yes and no / uncertain question , which the GM will answer based on the evidence which can be found in the scene or if you are having a conversation with someone, that someone is able to provide.

Inspiring

Feat level: medium

Grants you the ability to inspire others by spending luck tokens.

This action uses social general ability.

Base cost:  	Proficiency: -	Other costs: -
Target: 1 creature	Duration: -	Limit: -
Restrictions: -		
target gains inspiration		

Difficulty adjustment options:

+ 	They lose 1 level of Will related status effects
+  	They lose 3 level of Will related status effects

Lore weaver

Feat level: medium

You can spend a luck token, to recall and tell a common myth or story, about something that you encounter on your journey, these stories have a grain of truth in them, but may also have some parts as lies as well, depending on how elusive the topic is.

Master plan

Feat level: medium

You gain the master plan ability, which can be used if your party wants to do several things during a campaign turn (this cannot be used in combat), to increase the odds of them actually being successful.

Those actions formulate a plan which is then executed simultaneously.

Base cost:    	Proficiency: leadership	Other costs: -
Target: -	Duration: -	Limit: -
Restrictions: -		
When during a campaign turn your party wants to do several things, then you can do it following these steps: 1. Declare all the actions your party wants to do, there can be at most 1 action per player. 2. GM chooses the target and difficulty of the actions as normally. AND rolls the target dice first! 3. Then for each action one of the players is assigned and they will do the action, their success depends on their dice pool and proficiency, and they get an advantage. player. 4. After all actions are assigned a player, then players may choose to spend luck and then all the actions are resolved as if the plan is being executed simultaneously.		

Agent of chaos

Feat level: major

Causing chaos comes naturally to you. You can make ploys to disorient a group of enemies before the battle. You must still describe how you are going to do it and how using that skill makes sense. A new roll target is added to combat initiation phase with R5.R5.R5.R5 (cunning), that you may complete. If you succeed then all enemies start the combat with 1 level of disoriented. For an additional +R5 they start the combat with 2 levels of disoriented instead.

Excellent instructor

Feat level: major

Base cost:  	Proficiency: social	Other costs: -
Target: 1 ally	Duration: -	Limit: -
Restrictions: -		
Targeted ally gains your level of proficiency in a skill of your choice for the duration of this turn / scene.		

Difficulty adjustment options:

 	You can have another ally gain the same or different proficiency for this scene / turn.
---	---

Inspiring leader

Feat level: major

Requires: Inspiring

When using the inspire ability, you can spend 1 additional luck token so that up to 4 other people in your party (except for you) gain inspiration and other benefits of the inspire action.

Master

Feat level: major

Requires: Excellent instructor

For each party member you can choose one skill. Their effective proficiency bonus in that skill is equal to yours. That skill can be changed when doing 'Time out and recover'

Natural leader

Feat level: major

You gain the coordinate (social) action, which can used both during combat and out of combat.

Base cost:  	Proficiency: -	Other costs: -
Target: 2 allies	Duration: -	Limit: -
Restrictions: -		
Targeted allies may give up to 1 dice to the other ally to be used temporarily (that dice preserves it roll). The dice is returned after using it.		

Difficulty adjustment options:

+ 	They can give up to 1 additional dice
---	---------------------------------------

Mage/Martial

Blade enchanter

Feat level: medium

Weapon enchantment spells that are applied to the weapons you wield don't require concentration as long as you hit something with that weapon every round after it has been applied.

Magical protection

Feat level: major

Whenever you cast a buff spell on yourself that used at least 4 power dice, also do the Defend action for free. Gain +1 maximum defense.

Spell blade (or bow)

Feat level: major

When you hit an enemy with a weapon you can cast a single target spell that targets that enemy that costs no more than the number of power dice you used for the attack. Spend 2 mana for each dice cost for that spell.

Torturer

Feat level: major

For each different type of negative status effect you have applied onto an enemy that they have not yet removed, they have 1 level of vulnerable, which is only removed by removing negative status effects that cause it.

Trickster

Feat level: major

Whenever you apply prone or a level of burning, disoriented or afraid to a still resisting enemy, you gain 1 opportunity stack, which disappear at the end of battle (1 stack per level per resisting enemy) (if a enemy would stop resisting after 2 levels of disoriented, but you apply 4 levels, you get only 2 stacks).

When casting spells or attacking you can spend opportunity stacks to: * 3 stacks: to get a free additional power dice to the attack or spell (doesn't even cost mana). * 3 stacks: add one additional level of burning, disoriented or afraid to anyone who receives any of these stacks with the spell or attack already. * 10 stacks: double any damage the spell or attack would do. When spending opportunity stacks, you do not gain new opportunity stacks during that spell or attack. You can however choose however many options as you like and you can choose the same option up to 3 times.

Mage/Skilled

Potion maker

Feat level: major

You can make magical potions, which have the effects of spells you know how to cast, and which difficulty requirements you meet. These potions have however certain constraints:

1. The target is the person who drinks the potion. Spells with area of effect lose the area component.
2. Spell effects that have additional targets, like a location, cannot be made into a potion. The potion can only effect the creature drinking the potion.
3. When these potions have a concentration effect, instead they simply last 3 iterations (normally this is 3 rounds, but if a spell duration is otherwise 5 rounds, that is extended to 15 rounds instead and so on)

In order to make these potions there is a baseline cost for ingredients that is based on difficulty.

Difficulty is based on the number of dice that the spell, which effect is applied to the potion. Maximum number of dice is 8. Through role play, group focuses etc. these may be reduced.

DX means that the underlying spell requires X dice.

D3 and less - 20 gp D4 - 35 gp D5 - 60 gp D6 - 100 gp D7 - 200 gp D8 - 400 gp

It is also possible to increase the duration of those potions to 5 iterations, which would double the cost.

It is also possible to combine 2 spells into 1 potion, but they would add up their difficulties. This option would also double the cost.

Potions are also available through shops in the game world, however their prices would be around twice higher.

Martial/Skilled

Poison specialist

Feat level: major

You can prepare poison coatings and coat weapons with poison. In order to prepare poisons you need to gather poison glands or procure necessary raw materials from the marketplace. Depending on the situation it could require gathering, diplomacy, survival and would also have a different difficulty, plus may require some extra cost such as gold.

By default a coating applies 3 stacks of poison on a melee weapon or 2 stack to a single arrow.

The base line costs when procuring the materials from the market are the following:

1 damage per stack at the beginning of target's turn: 20 gp

2 damage per stack at the beginning of target's turn: 100 gp

stack of disoriented: 50 gp

stack of afraid: 80 gp

stack of freezing: 200 gp

The price doubles if you want to apply 5 stacks on a melee weapon or 3 stacks on a single arrow. And doubles again when wanting to apply 7 stacks on a melee weapon or 4 stacks on a single arrow.

A successful melee attack made with the weapon moves 1 stack of poison onto the hit target. A successful attack with an arrow moves all stacks of poison from the arrow onto the target.

At the beginning of the turn and after the poison stacks have taken effect, poison can be removed with the Recover general action.

Stacks of disoriented, crazed, afraid, and freezing cannot be reduced normally even though their effects work the same as having the same levels of the these status effects.

Enchanted weapons cannot be coated with poison.

Equipment

dagger

Base cost:  	Base damage: 2	Range: melee	
+ 	bypass damage reduction	+  	Double damage
+ 	+ 1 damage	+  	Disrupt 2

unarmed

Base cost: 	Base damage: 1	Range: melee	
+ 	+ 1 damage	+  	Disrupt 2
+   	Blind an enemy for 2 rounds	+  	Disarm opponent removing a one handed weapon or shield from them.
+   	Disarm opponent removing a two handed weapon from them.		

shortbow

Base cost:  	Base damage: 3	Range: 8 squares	
+ 	bypass damage reduction	+ 	+ 2 damage
+  	+ 5 damage	+  	Disrupt 1

spear

Base cost:  	Base damage: 3	Range: 2 squares	
+ 	+ 2 damage	+ 	Disrupt 1

axe

Base cost:  	Base damage: 2	Range: melee	
+ 	Remove guarded status effect	+ 	+ 1 damage
+  	+ 3 damage		

sword

Base cost: 	Base damage: 2	Range: melee	
+ 	Recover 1 defense	+ 	+ 1 damage
+ 	+ 3 damage		

sabre

Base cost: 	Base damage: 2	Range: melee	
+ 	+ 1 damage	+ 	+ 3 damage
+ 	Reposition within 1 sq.		

2 handed sword

Base cost: 	Base damage: 3	Range: melee	
+ 	Recover 2 defense	+ 	+ 2 damage
+ 	Reposition within 2 sq.		

1 handed mace

Base cost: 	Base damage: 2	Range: melee	
+ 	Bypass enemy damage reduction	+ 	+ 1 damage
+ 	Apply a level of disoriented		

2 handed mace

Strikes with 2 handed mace always bypass damage reduction

Base cost: 	Base damage: 3	Range: melee	
+ 	Reduce defenses by 3 before doing damage	+ 	+ 2 damage
+ 	Disrupt 1	+ 	Disorient 1

two handed axe

Base cost: 	Base damage: 3	Range: melee	
+ 	Remove guarded status effect	+ 	+ 2 damage
+ 	Apply 1 afraid	+ 	Apply 1 vulnerable

shield

When using the shield action, get guarded buff until the beginning of your next turn which increases your maximum defense by 2 and damage reduction by 1. Also recover 2 defense.

Base cost: 	Base damage: -	Range: melee	
+ 	Gain an additional damage reduction		

staff

Instead you have 2 additional normal spell slots and 1 signature spell slot. The spell used in the signature spell slot has advantage. Signature spell cannot be switched out mid combat.

simple leather armor

Light armor: Provides 2 maximum defense

Heavy chain mail

This is a heavy armor that provides 4 maximum defense and 1 damage reduction

padded leather armor

This is medium armor that provides 4 maximum defense

claw

This is not a weapon, but can be used when taking the unnatural limbs racial innate feat. Also used by beasts

Base cost: 	Base damage: 2	Range: melee	
+ 	bypass damage reduction	+ 	+ 1 damage
+ 	Apply 1 vulnerable		

secondary claw

This is not a weapon, but can be used when taking the unnatural limbs racial innate feat. Also used by beasts

Base cost:  	Base damage: 2	Range: melee	
+ 	bypass damage reduction	+ 	+ 1 damage
+ 	Apply 1 vulnerable		

bite

This is not a weapon, but can be used by beasts

Base cost:  	Base damage: 2	Range: melee	
+ 	+ 1 damage	+  	Apply 1 disoriented
+  	Also get a level of upper hand as if you had done the wrestle action without spending stamina.		

Spells

Arcanum (intelligence)

Identify

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

A ritual to identify the magical properties of magical items. While some magical items might have obvious magical properties, like a flaming sword doing additional fire damage, others may have hidden or more complex properties that would need to be either studied, matched with historic records, tested out blindly, or you could cast this ritual instead. The final cost of the ritual depends on the complexity of the magical item. It costs 2xR1 to identify a simple but none obvious effect. It costs 4xR1 to identify more obscure hidden effects, including if the item has a simple curse, that the creator tried to hide. It costs 10xR1 to identify legendary items, their properties, hidden properties and curses. It may not be obvious which kind of magical item it is. However if you spend at least 2xR1 you will know if it has as more obscure hidden effects. And if you spend at least 4xR1, then you you will know if the item is of legendary quality. Even for some legendary items you could learn some properties with either 2 or 4 xR1, but this is up to GM to decide. Also note that if a legendary item does not have this mid level effects, then one may not learn that there is more to reveal by only spending 2xR1.

Transfer magic

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

A ritual to transfer magical properties from one item, to another item which could hold that magical property. So from a one handed weapon to another one handed weapon, or for example from one armor to another. You might want to do that if the weapon type of the origin weapon does not suit you, or if the base quality of the armor or weapon is better for the newer item. Or if you want to hide a magical effect by removing it from a recognised piece of jewelry to one no one knows about. Some magical effects could be weapon type or armor type specific, these in that case couldn't be moved to other types but to only items these properties are intended for. Doing this is a ritual costs 6xR1 for simple effects, 14xR1 for obscure effects but for legendary items, it costs 25xR1.

Record memory

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

This is a magical technique where you can record what you think, feel, see, hear during the magical effect and store this into a cleanly cut large emerald stone costing at least 100 gp. This can later be used to have someone else or yourself to relive these memories. This magic is often used to record act of crime, or parts of investigation to then in the future present this as evidence. The mana cost depends on the length of the campaign turn you want the recording to be done. 3 mana for quick turns, 6 for medium and 9 for strategic turns. Those who know this spell can also attempt to tamper these memories, though the process can either break the crystal, losing the memory entirely, or may be done in a way that it is clear that it has been tampered with. Tampering costs twice as much mana as creating those memories in the first place, and you must roll for the quality of the tampering, whoever looks at those memories may attempt to roll against your quality in order to understand that this has been tampered with. Un suspecting NPC-s usually wouldn't do that, however judges or those who have reasons to not trust you will definitely do it.

Detect magic

Cost:	Target: -	Range: 8 sq.	Area radius: -
Duration: 7 rounds	Concentration:		

You know if there are active magical effects within range of you. The scaling of this spell is a bit more complicated. You can spend an additional R1 to be able to tell which school of magic the effects belong to. You can do it after you learn there are magical effects at all. You can spend an additional R1 to tell which exact spell this is. Finally you can spend another R1.R1 to learn exactly where the effect is, what it is attached to, how long ago it was cast, and if it has an duration, how long does it last. If you have paid all the costs then you can also tell when someone starts casting a spell within range. The additional costs don't have to be spent in the same round as initial cast.

Counterspell

Cost: ?	Target: -	Range: 8 sq.	Area radius: -
Duration: -	Concentration: NO		

In order to counter spells, you need to be detecting magic and having paid all the additional costs. When someone casts a spell, you can, as a reaction spend same amount of R1 as they spent on their spell to negate the effect of the spell. Both of you still spend their mana.

+	Use limit: 2	You get the caster of the spell to spend 2 additional mana
------------------------	---------------------	--

Dispel magic

Cost: ?	Target: -	Range: 8 sq.	Area radius: -
Duration: -	Concentration: NO		

In order to dispel spells, you need to be detecting magic and having paid all the additional costs. You can dispel magical effects, buffs and effects of rituals. The cost to dispel is equal to the cost of initial spell or ritual to cast it but in R1-s. You can dispel concentration spells / buffs / curses normally, without performing a ritual. And for rituals you need to perform a dispelling ritual.

+ 	Use limit: 2	You get the caster of the spell to spend 2 additional mana
---	---------------------	--

Control magical object usage

Cost:	Target: one magical item	Range: -	Area radius: -
Duration: -	Concentration: NO		

Add a zeal onto target magical item, that makes it completely unusable or permits it's use to one particular individual. If that individual were to die, then the zeal would simply make it unusable by anyone. To make the zeal, one has to perform a ritual and spend at least 3 x R1. However technically there is no ceiling. To break the zeal someone who knows this spell, could also perform a counter ritual, that would need to spend as many R1-s as was spent to make the original zeal. By initial inspection one could only tell if the number of R1 required is more or less than 10. Other wise as you start making the ritual, you will feel when you hit 25 %, 50 % and 75 % on your way to cracking the zeal. When you fail to crack the zeal and end the ritual, then 1 / 3 (rounded down) of the spent R1s still lower the zeals strength for future.

Force (intelligence)

Telekinesis

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

You can move objects with your mind for various effects. Move a bucket of hot water on top of your enemies, a key from the guard to you for escape, etc. This is a creative spell so please refer to the creative spell section in the glossary.

Push/pull

Cost:	Target: single	Range: 8 sq.	Area radius: -
Duration: -	Concentration: NO		

Move target away from you or towards you for 2 sq. Halve the distance for large creatures and those wearing heavy armor. Huge and larger creatures cannot be moved this way.

+	Use limit: unlimited	increase the move distance by 2 sq. Target also gets 1 level of unbalanced
+	Use limit: unlimited	For the purposes of moving the target and balance checks the creature is considered to not be wearing heavy armor and also to be one size smaller

Explosive force

Cost:	Target: point	Range: 8 sq.	Area radius: 1 sq
Duration: -	Concentration: NO		

A force pushes everyone around target point 2sq. They also get 1 level of unbalanced

+	Use limit: unlimited	The force pushed them 2 additional sq.
+	Use limit: unlimited	They get 1 additional level of unbalanced.

Wall of force

Cost:	Target: -	Range: 12 sq.	Area radius: -
Duration: -	Concentration: NO		

Create a 2 sq. long wall. arrows that would fly through this area, lose their speed and fall on the ground. It takes 3 sq. worth of movement to go through the wall of force

+	Use limit: unlimited	increase the length by 2 sq.
+	Use limit: unlimited	At the beginning of each of your rounds you can move the position of the wall
+	Use limit: 3	It requires 2 additional sq. worth of movement to go through the wall of force

Force field

Cost:	Target: self	Range: touch	Area radius: -
Duration: 3 rounds	Concentration: NO		

Increase your maximum defense to 2 (note, this does not stack with armor and is only useful if you don't have maximum defense from armor or natural armor). You can use force proficiency to take the defend basic action.

+	Use limit: unlimited	The maximum defense provided by this spell is increased by 1
+	Use limit: unlimited	Gain 1 damage reduction

Nature (cunning)

Nature's gifts

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

After learning this spell, when trying to find food, or otherwise survive in the wilderness, you can use your nature proficiency instead of survival proficiency to make the checks. Doing so costs no mana, and you cannot amplify this ability with mana.

Growth and Decay

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

This is a creative spell. It accelerates the growth of plants for a short duration, letting them grow days or even weeks worth of growth within seconds. However this comes at the expense of your health. You can restore your well being by having same or other plants decay at similar pace. The bio mass of the plants and severity of decay must match the bio mass and benefits of the growth part.

Strength

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

This is a creative spell. You boost the strength of yourself or one of your allies. After learning this spell you can replace physique proficiency with nature proficiency when doing physique challenges requiring strength or endurance.

Speak with animals

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

This is a creative spell. This allows you to commune with animals, and try to befriend, convince them, or ask them questions. They are still animals and can't understand concepts that would make no sense for animals, like religion, human factions, difference between human weapons etc.

Remove poison

Cost:  	Target: single	Range: touch	Area radius: -
Duration: -	Concentration: NO		

Remove a single stack of poison from the target

+ 	Use limit: unlimited	remove a level of poison
---	-----------------------------	--------------------------

Healing ritual

Cost: 3X 	Target: single	Range: touch	Area radius: -
Duration: -	Concentration: NO		

This is a ritual. Target recovers 1 damaged die or removes all damage from wounded dice, or removes 1 level of burning, poison or freezing. Each act of healing that recovers dice, scars one of the recovered dice. You can recover dice through healing, if a none scarred dice is wounded. Scarred dice can still be recovered as the additional dice with this spell.

+ 5X 	Use limit: unlimited	This heal recovers 1 additional damaged die
+ 5X 	Use limit: unlimited	The same healing ritual applies to 1 additional target
+ 	Use limit: unlimited	remove a level of freezing

Grant luck

Cost: 	Target: single	Range: touch	Area radius: -
Duration: -	Concentration:    .		

Target can change the result of one die in the dice pool when you cast and each time you concentrate on it

+   	Use limit: unlimited	Target can change another die in their dice pool
---	-----------------------------	--

Entangling roots

Cost:  	Target: area	Range: 6 sq	Area radius: 2 sq
Duration: -	Concentration:  		

Requires being in the wild. Roots grow from the ground and entangle anyone. Anyone starting their round or entering the area of effect gain 2 levels of entangled

+ 	Use limit: unlimited	Anyone starting their round or entering the area of effect gain additional 1 level of entangled
+ 	Use limit: unlimited	Anyone starting their round or entering the area of effect take 2 piercing damage

Harmony (social)

Harmonious voice

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

You encompass the essence of harmony, making you able to speak in a extremely calming, compassionate and convincing voice. This can for example help you sway large crowds, or people who are who are neither evil, power hungry nor emotionless. This is a creative spell.

Guardian

Cost: 	Target: self	Range: -	Area radius: 1 sq.
Duration: -	Concentration: 		

When you have the guarded buff, then allies standing within radius. of the target also have that buff.

+ 	Use limit: 1	This spell can target others. Gaining the range of touch.
+ 	Use limit: 1	Increase maximum defense of the target by 1
+  	Use limit: 1	If the target is willing, he may direct an attack onto them for all attacks made to an ally within this spells radius.

Clarity

Cost: 	Target: 1 creature	Range: -	Area radius: -
Duration: -	Concentration: NO		

Remove 1 lvl from all negative status effects related to WILL saving throws.

+ 	Use limit: unlimited	Remove one additional level from those status effects
---	-----------------------------	---

Bless

Cost: 	Target: up to 3 allies	Range: 5 sq.	Area radius: -
Duration: -	Concentration: 		

Targets have advantage for refocus and recover actions.

+ 	Use limit: 2	Targets have 1 additional maximum defense
+  	Use limit: unlimited	Targets remove 1 negative status effect at the beginning of their turn for free

Recover defenses

Cost:  	Target: area	Range: 5 sq.	Area radius: 1 sq.
Duration: -	Concentration: NO		

All friendly allies in the targeted area recover their defenses to the maximum

+ 	Use limit: unlimited	They gain 1 temporary defense pushing their defense over their maximum
---	-----------------------------	--

Harmony of souls

Cost: 10 X 	Target: Up to 8 willing	Range: -	Area radius: -
Duration: 1 day	Concentration: X / 2 mana		

Harmony of souls is a ritual that connects the souls of the participants in a way that they sense each other's concerns, desires, feelings, excitement, and even though they don't hear each other's thoughts they get glimpses and a sense of some of the thoughts especially if those thoughts make a lot of sense to them or if they have similar thoughts themselves. This allows players to assist each other by spending 2 dice and one of those dice is added to a roll target, attack, spell, action etc. If it is added to spell then the normal 1 additional mana cost still applies.

+ 8 X 	Use limit: unlimited	Participants may make will actions instead of other participants. They may also do the recover defenses action for other participants.
---	-----------------------------	--

Elemental (intelligence)

Stone speech

Cost:	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

You can talk to stone and dirt in the earth, and command them to shape, shift, crumble, collapse or thicken. This is a creative spell.

Fireball

Cost:  	Target: area	Range: 8 sq.	Area radius: 1 sq.
Duration: -	Concentration: NO		

Deal 2 fire damage to everyone in the area.

+ 	Use limit: unlimited	Deal additional 2 damage
+ 	Use limit: unlimited	1 target enemy within radius gets a level of burning

Chain lightning

Cost:  	Target: single target	Range: 8 sq.	Area radius: 3 sq.
Duration: -	Concentration: NO		

Deal 4 lightning damage to a target enemy, and then it jumps to another target enemy within radius of the first target dealing 2 less damage. This jumping continues until next jump would do no more damage (that means increasing the initial damage increases the number of jumps). damage

+ 	Use limit: unlimited	Increase initial damage by 2
+ 	Use limit: unlimited	Everyone hit by chain lightning get 1 level of disoriented

Tremor

Cost: 	Target: area	Range: 6 sq.	Area radius: 2 sq.
Duration: -	Concentration: 		

everyone in the target area gain 2 levels of unbalanced. At the beginning of your round, when you continue to concentrate on this spell, you may move the center of tremor up to 2 sq. When you are outside the range of the tremor you lose concentration.

+ 	Use limit: unlimited	The gain an additional level of unbalanced
---	-----------------------------	--

Frostbite

Cost:  	Target: single target	Range: 8 sq.	Area radius: -
Duration: -	Concentration: NO		

Target enemy gets one level of freezing

+  	Use limit: unlimited	Target gets another level of freezing
+ 	Use limit: unlimited	You get to choose which of the dice are frozen

Rune trap ritual

Cost: 2X* 	Target: single target	Range: 8 sq.	Area radius: -
Duration: -	Concentration: NO		

Make a trap that when triggered casts either fire-ball, chain lightning or frostbite upon the target. The cost of this spell scales depending on the dice cost of the target spell. Let the target spell cost be X*R6

Elemental weapon

Cost: 	Target: single weapon	Range: touch	Area radius: -
Duration: 3 rounds	Concentration: 		

Choose fire, cold or lightning. Enchant target not enchanted weapon. Target weapon deals 1 extra damage of the chosen damage type with every attack made with this weapon.

+ 	Use limit: unlimited	target weapon deals an additional 1 damage of the chosen type
+ 	Use limit: 1	You need to have chosen cold. Convert all physical damage target weapon does to cold damage. Each time that weapon hits an enemy the enemy gets one level of freezing
+ 	Use limit: 1	You need to have chosen lightning. Convert all physical damage target weapon does to lightning damage. Each time that weapon hits an enemy, the enemy gets 1 levels of disoriented.
+ 	Use limit: 1	You need to have chosen fire. Convert all physical damage target weapon does to fire damage. Each time that weapon hits an enemy, the enemy gets one level of burning.

Dimension (precision)

School of dimension deals with overcoming great distances and moving between planes. Most things however, like teleportation, long distance communication or moving to other planes is a complex matter and requires rituals to be made.

Pass object

Cost: 	Target: 1 creature	Range: 6 sq.	Area radius: -
Duration: -	Concentration: NO		

Teleport a tiny object weighing no more than 1 kg. onto the possession of another willing creature. You can place it on them wherever you would like.

+ 	Use limit: unlimited	Increase the max object weight by 1 kg
+ 	Use limit: 1	When passing a potion onto a willing subject, they can also drink it and receive it's benefit immediately
+ 	Use limit: 1	When passing a vial of poison onto a willing subject, you can coat their melee weapon or next arrow with that poison vial instead

Blink jump

Cost:  	Target: empty space	Range: 8 sq.	Area radius: -
Duration: -	Concentration: NO		

Instantly disappear from your current location without provoking any attacks of opportunity and reappear in the target location

+ 	Use limit: unlimited	Increase range by 8 sq.
---	-----------------------------	-------------------------

Teleportation ritual

Cost: 9 X 	Target: -	Range: 50 km.	Area radius: -
Duration: 1 min.	Concentration: 8 mana		

Create a temporary teleportation portal from which up to 10 normal sized creatures can go through to go to a target which is 50 km away. The ritual master or one of the participants must know this target location. The portal stays open for 1 minute or until 10 creatures go through it whichever happens first.

+ 7 X 	Use limit: 3	double the range
+ 10 X 	Use limit: 3	double the range

Communication ritual

Cost: 3 X 	Target: -	Range: 10 km.	Area radius: -
Duration: 1 hour	Concentration: NO		

Create a temporary communication link between a mirror you can touch and a mirror one of the participants knows in the world that is within the range of the ritual

+ 3 X 	Use limit: 5	double the range
+ 5 X 	Use limit: 5	double the range

Step between dimensions

Cost:   	Target: self	Range: -	Area radius: -
Duration: -	Concentration:  		

You become corporeal becoming unaffected by all effects in the material plane. By default you cannot attack, cast spells or concentrate on spells in a way that would affect anyone in the material plane.

+  	Use limit: unlimited	Target may cast spells that would affect the material plane
+ 	Use limit: unlimited	This spell can target any willing creature. This spell gains a range of touch.
+  	Use limit: unlimited	This spell can target any creature. This spell gains a range of touch.
+ 	Use limit: unlimited	Target may concentrate on spells that would affect the material plane

Discord (cunning)

Regarding hexes. Each creature can by default have only 1 hex placed on them. This can be overwritten by certain feats. Any creature with a hex on them can make a R2.R2 remove hex action using Will proficiency for weak hexes, R2.R2.R2 for strong hexes and R2.R2.R2.R2 for extreme hexes. Hexes cannot be applied to your allies to override hexes by your enemies. However if an ally has hexed a creature, then your hex would override their hex(s) if their hex is weaker or equal to your hex's strength, unless you are able to place multiple hexes on the enemy.

Enfeeble hex

Cost: 	Target: 1 creature	Range: 6 sq.	Area radius: -
Duration: -	Concentration: 		

Now and each time target enemy rolls, you may change the outcome 1 dice. It has to be a different dice than was changed by lucky condition, if the enemy was lucky and is done after the lucky dice is chosen.

+ 	Use limit: unlimited	Increase the strength of this curse up 1 level
+  	Use limit: unlimited	You may change the outcome of 1 additional dice

Pain hex

Cost: 	Target: 1 creature	Range: 6 sq.	Area radius: -
Duration: -	Concentration:  		

Whenever target is hit, they take 1 extra psychic damage. After that they may use a reaction to remove this curse if they have the required dice

+ 	Use limit: unlimited	Increase the strength of this curse up 1 level
+  	Use limit: unlimited	Target takes 1 additional psychic damage when hit

Maddening hex

Cost:  	Target: 1 creature	Range: 6 sq.	Area radius: -
Duration: -	Concentration:   		

At the beginning of their turn, the hexed creature gets 1 level of either disoriented or afraid.

+ 	Use limit: unlimited	Increase the strength of this curse up 1 level
+  	Use limit: unlimited	Hexed creature also gets 1 level of the other status effect

Mage bane hex

Cost: 	Target: 1 creature	Range: 6 sq.	Area radius: -
Duration: -	Concentration: 		

The mana cost for all spells is doubled

+ 	Use limit: unlimited	Increase the strength of this curse up 1 level
---	-----------------------------	--

Shattering Shriek

Cost: 	Target: 1 creature	Range: 12 sq	Area radius: -
Duration: -	Concentration: NO		

A extremely loud shriek hits, heard loudest by the target. It deals 2 psychic damage and the target has to give up concentration of 1 spell. This damage ignores defenses and damage reduction.

+ 	Use limit: 3	deal additional 2 psychic damage
+ 	Use limit: 1	Target loses concentration of one additional spell

Pain sharing

Cost: 	Target: 1 creature	Range: touch	Area radius: -
Duration: 2 rounds	Concentration:  		

Buff an ally, so that when they take damage to their health, then whoever caused that damage takes the same amount of psychic damage. This psychic damage ignores damage reduction and defense.

+ 	Use limit: unlimited	The one dealing the damage also gets 1 levels of disoriented for every 2 damage dealt rounded up
+ 	Use limit: unlimited	For each damage dealt, you siphon 1 mana back to yourself.

Weapon of horrors

Cost: 	Target: 1 weapon	Range: -	Area radius: -
Duration: 3 rounds	Concentration: 		

Enchant a weapon, weapon cannot be magical or be otherwise enchanted with another effect. This weapon requires 1 less power dice to make an attack.

+ 	Use limit: 2	When that weapon deals at least 6 damage with an attack, target enemy gets 1 level of afraid
+ 	Use limit: unlimited	Target weapon deals 1 additional psychic damage per power dice spent
+ 	Use limit: unlimited	When the weapon kills a hexed enemy with this weapon, immediately cast the hex on another target

Dread

Cost:   	Target: 1 enemy	Range: -	Area radius: -
Duration: 2 rounds	Concentration:   .		

Target enemy gets 2 levels of afraid, when target is killed while under the effect of this spell, Another target of your choice gets all the levels of afraid of the killed enemy and becomes the new target of this spell.

+  	Use limit: 2	When target is killed ,then 1 additional level of afraid is passed to the new target
+ 	Use limit: unlimited	Target gets an additional level of afraid
+ 	Use limit: unlimited	When you pay the concentration cost, also deal psychic damage to the target equal to the number of levels of afraid on him.

Darkness

Cost:  	Target: any square	Range: 8 sq.	Area radius: 2 sq.
Duration: 2 rounds	Concentration:   .		

Darkness sweeps from the target point and all natural light gets vanquished in the target area. Only those with dark vision can peer through. Those inside it are blinded unless they have dark vision or blind sight. In addition, while inside the darkness, characters cannot remove hexes or remove disoriented or afraid stacks. Every time you pay the concentration cost, you can move the cloud of darkness by up to 4 sq. from the original spot.

+  	Use limit: 1	Even those with dark vision cannot see through this cloud of darkness and while being inside it, they are blinded. Only blind sight helps against this.
+ 	Use limit: 1	You can see hexed enemies inside the darkness and while being inside the darkness, you are not treated as being blind against hexed enemies.

Illusion (cunning)

False threats

Cost:  	Target: area	Range: 6 sq.	Area radius: 1 sq.
Duration: -	Concentration: NO		

Pose an illusionary threat to enemies in the area, they gain 2 levels of disoriented

+ 	Use limit: 3	Everyone get 1 additional level of disoriented
+ 	Use limit: 3	One target within radius gets 1 additional level of disoriented

Block sight

Cost:  	Target: creature	Range: 6 sq.	Area radius: -
Duration: 1 round	Concentration:  		

Block target's sight with an illusion making them effectively blind.

Side step

Cost:  	Target: 1 creature	Range: -	Area radius: -
Duration: -	Concentration: NO		

When a hit would hit you, you may instead move 1 sq. to your chosen direction without provoking any attacks of opportunities and the attack misses.

+  	Use limit: 2	Target gains 1 level of disoriented
---	---------------------	-------------------------------------

Create illusionary images

Cost:  ??	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

You create illusionary images in the space around you, which can impress, surprise, deceive etc. This is a creative spell so please refer to the creative spell section in the glossary

Disguise self

Cost:  ??	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

You use illusions to disguise yourself as someone else, in order to deceive other people into believing you are that person. In order to do that convincingly, you would still need to know what that person looks like, how they behave, what are their mannerism, how they talk and so on. This is a creative spell.

Invisibility

Cost: 	Target: self	Range: -	Area radius: -
Duration: 2 rounds	Concentration:  		

You appear invisible as long as you are standing still. When you move, cast spells, attack or otherwise perform a action with rapid movement, there are ripples that hint others that there is somewhere there where you are and also the nature of the movement. Attacks against enemies that rely on sight have advantage, and attacks by enemies against you who rely on sight have disadvantage. This allows you to sneak in broad daylight. This can also be used as a creative spell during campaign turns.

+ 	Use limit: 1	When you move at half speed, then no ripple is creating so you have perfect invisibility. This allows you to sneak in broad daylight
+ 	Use limit: 1	Casting spells no longer creates ripples.
+ 	Use limit: 1	Attacking no longer creates ripples. This gives you double advantage for attacks
+ 	Use limit: 1	You can select another ally as the target of this spell. This spell gains the range of touch. To maintain the illusion the target must remain within line of sight from you.

Shattering presence

Cost: 	Target: self	Range: -	Area radius: -
Duration: 3 rounds	Concentration:  		

Your existence becomes questionable as you start to blur, and appear to be in multiple close places at once. It becomes hard to target you. Any offensive spell or attack targeting you has a 50 % chance to fail.

+ 	Use limit: 1	You can target another creature instead of yourself. This spell gains a range of 6 sq.
+ 	Use limit: 1	When a spell or attack does hit you, you can give up dice with a total sum of 6 to negate that after all.

Hide large object

Cost: 8 X 	Target: Some object	Range: -	Area radius: -
Duration: 1 day	Concentration: X/2 mana		

This is a ritual to hide, for example a house, or an entrance to a cave, or if you go really wild, then even a castle. The idea is to create an illusion so that something doesn't appear to be there even though it is. The basic version can conceal an object that is no more than 5mx5mx5m in volume and requires 8 dice to succeed, however larger objects can be attempted to be concealed for more dice. Let the final resulting number of dice be X. That X is required for concentration cost

+ 3 X 	Use limit: unlimited	increase the maximum length of one of the dimension by 5m
---	----------------------	---

divination (intelligence)

Diviners advantage

Cost: 	Target: self	Range: -	Area radius: -
Duration: 2 rounds	Concentration:  		

Increase your maximum defenses by 2 and recover all defenses (defense is not recovered every round, only those rounds when concentration cost is paid).

+ 	Use limit: 3	Increase maximum defense by another 1
+ 	Use limit: 1	Your attacks go through defense directly and cannot be dodged unless the enemy also has diviners advantage.

Divine sight

Cost: 	Target: self	Range: -	Area radius: 6 sq.
Duration: 1 rounds	Concentration: 		

Gain blind sight of 6 sq.

Glimpse into future

Cost: 	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

During campaign turn you can ask a question about the campaign turn to which GM answers honestly either yes / no / yes and no / yet uncertain

+ 	Use limit: 1	Ask another follow-up question.
---	---------------------	---------------------------------

See beyond the veil

Cost: 	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

Reveal the difficulty of some challenge in the future based on assumptions you have to list to GM.

Divine guidance

Cost: 	Target: -	Range: -	Area radius: -
Duration: -	Concentration: NO		

Think of an object or person, and get a sense of which direction you should go to get closer to the person / object. It doesn't reveal the distance or place of the target, only the direction.

None humanoid creatures

None humanoid creatures (beasts, monsters, undead) can be created similarly like player characters. Only difference is that they have their own base archetypes, with custom features, kinda like having innate feats and then they have a path, with it's own feats and advancement options. This is more to create epic monsters, but ideas can also be gotten for mob monsters.

Beasts

Archetypes

small animal

Free dodge per turn. -1 Toughness, max toughness is 3. Raw damage is halved. +1 reflex. Has bite attack only

medium sized predators

3 Defense. Has 2 claws and bite attack

medium sized spider

2 defense, is a web weaver, Can bite.

large sized predators

3 Defense, 1 damage reduction, -1 reflex. +2 damage for first attack each turn, -1 progression points per level. Has 2 claws and bite attack

Bird predator

3 Defense, ability to fly, -1 progression points per level. Has 2 claws and bite attack

Tiny bird

Free dodge per turn, -1 toughness, max toughness is 3. Raw damage is halved, +1 reflex, - 1 progression points per level. Has bite attack only

gain 3 stamina

gain 2 stamina

gain 1 stamina

Mark 4 minor options at levels 1 and 3, and 1 minor and 1 major option at levels 2 and 4

Feats

Bite grappling

Feat level: Medium

if you succeed in a bite attack, then in addition to the damage and other effects, target becomes grappled. While grappled, target cannot take the move action if their size is same or smaller than yours. Otherwise, if they do a move action, they move you along with them. If you take damage, make a FORTITUDE check with a DC of damage / 2. When you fail the check, the grappling ends. You must spend 2 STA to hold the grapple at the beginning of your turn. While grappling you cannot do another bite attack.

Legendary speed

Feat level: Medium

During your move action you can spend 1 stamina to move additional squares equal to the number on the dice used to move.

Fast beast

Feat level: small

Your move action allows you to move 2 additional squares

Leaper

Feat level: Medium

During your move action you can spend 1 stamina to leap over all obstacles for 3 squares. These 3 squares must still be part of your move action

Venomous bite

Feat level: Major

When choosing this trait, choose an effect: at the beginning of round, deals 1 poison damage, acts as 1 lvl of afraid, acts as 1 lvl of disoriented, acts as 1 lvl of freezing. Adds a new option for bite: For 1 power dice to apply 1 level of poison.

Rampage

Feat level: Medium

You get a new option to spend 3 stamina to make the copy of an attack you did to one target, to attack another target who is adjacent to you.

Leaping attack

Feat level: Medium

You can do a melee attack to someone who is 2 squares away from you and there is a free space between you and the target. Leap to the free spot and make the attack. You do not trigger any attacks of opportunities this way, since this is not a move action.

Web

Feat level: Major

Requires: Web weaver

Using the web requires web proficiency and can be advanced instead of natural attack proficiency.

Base cost: 	Proficiency: -	Other costs: -
Target: single	Duration: -	Limit: -
Restrictions: -		
The target gains 4 levels of entangled.		

Difficulty adjustment options:

+ 	The target gains 3 additional levels of entangled
+ 	Apply 2 lvls disoriented

Web range

Feat level: Medium

Requires: Web weaver feat

Range of the web action increases to 5 sq.

Fearless

Feat level: Medium

Immune to afraid condition

Thick skin

Feat level: Medium

Get 1 additional defense

Rage

Feat level: Major

Gain rage action.

Base cost: 	Proficiency: fortitude	Other costs: -
Target: self	Duration: 5 rounds	Limit: once per encounter
Restrictions: -		
You go into rage where you stay for 5 rounds or until you go unconscious. While raging you are immune to confusion and disruption. You lose all your defense and cannot recover any defense. However you still roll all the dice that were set aside because of damage and scarred dice can be used for targets 4, 5 and 6 as well.		

Dodging

Feat level: Medium

Whenever you would receive damage you can react with a R5 physique dice to negate that damage. This cost goes up by 1 X R5 every time you use this ability during encounter. You can take the recover action to reset it to 1 dice again.

Dodging requires no or light armor

Base cost: 	Proficiency: physique	Other costs: -
Target: self	Duration: -	Limit: -
Restrictions: -		
reset the dodging reaction dice cost to 1 dice
